ACCOUNTING

9706/22 May/June 2016

Paper 2 Structured Questions MARK SCHEME Maximum Mark: 90

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2016 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

® IGCSE is the registered trademark of Cambridge International Examinations.

Cambridge International AS/A Level – May/June 2016	9706	22

(d)

Level	Description	Marks
Level 3	Movements in both ratios analysed with identification of a wide range of possible causes for the movements in both ratios	5–8
Level 2	Movements in both ratios analysed with valid comments for both , with a more limited evaluation of possible causes for the movements.	3–4
Level 1	Movement in only one ratio analysed with valid comments with very limited identification of possible causes for the movement. Or discussion of both ratios but only valid comments on one .	1–2
Level 0	No creditable response	0

Gross Profit

Valid comments may include

Jing may have had to pay higher prices from his usual suppliers but have been unable to pass on these higher prices to his customers. Or Jing may have had to purchase from new suppliers who were more expensive.

To be competitive with other businesses, Jing may have had to reduce his prices and therefore his gross margin has reduced

Jing may have introduced some new products at a lower introductory price.

To increase his volume of sales, Jing may have had more seasonal sales promotions

Jing's closing inventory has reduced significantly so there may have been out-of-date inventory that he wanted to clear at reduced prices.

Jing's inventory control may not have been as good and if more inventory was being lost, damaged or stolen, this would increase his cost of sales.

Closing inventory may be understated/miscalculated.

Profit for the year

Valid comments may include

The increase in the profit margin could have resulted from Jing controlling his overheads better

The increase in the profit margin could have resulted from a decrease in total overheads

Most overheads, including rent, do not normally increase in proportion to sales

Jing may have moved to smaller premises such that his rent has reduced compared to the previous year. [8]

(c) Easier to calculate

Cheaper to calculate Some products may require more labour hour/machine hours Less accurate Different products may spend different time in each department.

1 mark for decision and 1 mark for each valid point

[4]

(d) Over absorption of overheads will mean that too much overhead is charged to the product
(1). This means that a higher price is charged to the customer (1) leading to increased profits
(1).
Or

Over absorption of overheads could also lead to a higher selling price (1) leading to lower demand (1) and lower profits (1).

Under absorption of overheads could lead to insufficient overhead being charged to a product (1). This means a lower price is charged to the customer (1) which fails to cover costs and reduces profit (1).

Or

Under absorption of overheads could also lead to a lower selling price (1) leading to higher demand (1) and higher profits (1).
