Paper 3 Structured Questions

October/November 2022

MARK SCHEME

Maximum Mark: 150

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2022 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

This document consists of **17** printed pages.

PUBLISHED**Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

PUBLISHED**Social Science-Specific Marking Principles
(for point-based marking)****1 Components using point-based marking:**

- Point marking is often used to reward knowledge, understanding and application of skills. We give credit where the candidate's answer shows relevant knowledge, understanding and application of skills in answering the question. We do not give credit where the answer shows confusion.

From this it follows that we:

- a** DO credit answers which are worded differently from the mark scheme if they clearly convey the same meaning (unless the mark scheme requires a specific term)
- b** DO credit alternative answers/examples which are not written in the mark scheme if they are correct
- c** DO credit answers where candidates give more than one correct answer in one prompt/numbered/scaffolded space where extended writing is required rather than list-type answers. For example, questions that require n reasons (e.g. State two reasons ...).
- d** DO NOT credit answers simply for using a 'key term' unless that is all that is required. (Check for evidence it is understood and not used wrongly.)
- e** DO NOT credit answers which are obviously self-contradicting or trying to cover all possibilities
- f** DO NOT give further credit for what is effectively repetition of a correct point already credited unless the language itself is being tested. This applies equally to 'mirror statements' (i.e. polluted/not polluted).
- g** DO NOT require spellings to be correct, unless this is part of the test. However spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. Corrasion/Corrosion)

2 Presentation of mark scheme:

- Slashes (/) or the word 'or' separate alternative ways of making the same point.
- Semi colons (;) bullet points (•) or figures in brackets (1) separate different points.
- Content in the answer column in brackets is for examiner information/context to clarify the marking but is not required to earn the mark (except Accounting syllabuses where they indicate negative numbers).

3 Calculation questions:

- The mark scheme will show the steps in the most likely correct method(s), the mark for each step, the correct answer(s) and the mark for each answer
- If working/explanation is considered essential for full credit, this will be indicated in the question paper and in the mark scheme. In all other instances, the correct answer to a calculation should be given full credit, even if no supporting working is shown.
- Where the candidate uses a valid method which is not covered by the mark scheme, award equivalent marks for reaching equivalent stages.
- Where an answer makes use of a candidate's own incorrect figure from previous working, the 'own figure rule' applies: full marks will be given if a correct and complete method is used. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.

4 Annotation:

- For point marking, ticks can be used to indicate correct answers and crosses can be used to indicate wrong answers. There is no direct relationship between ticks and marks. Ticks have no defined meaning for levels of response marking.
- For levels of response marking, the level awarded should be annotated on the script.
- Other annotations will be used by examiners as agreed during standardisation, and the meaning will be understood by all examiners who marked that paper.

ANNOTATIONS

The following annotations are used in marking this paper and should be used by examiners.

Annotation	Use or meaning
✓	Correct and relevant point made in answering the question.
×	Incorrect point or error made.
LNK	Two statements are linked.
REP	Repeat
A	An extraneous figure
N0	No working shown
AE	Attempts evaluation
R1	Required item 1
R2	Required item 2
OF	Own figure
EVAL	Evaluation
NAQ	Not answered question
BOD	Benefit of the doubt given.
SEEN	Noted but no credit given
Highlight	Highlight
Off page Comment	Off page comment

Question	Answer	Marks
5(a)	Sales volume $105 \times (12\,500 - 10\,000) = 262\,500$ F (2) Material price $26\,250 \times (12 - 11.9) = 2\,625$ F (2) Material usage $12 \times (25\,000 - 26\,250) = 15\,000$ A (2) Labour rate $40\,000 \times (11 - 10.6) = 16\,000$ F (2) Labour efficiency $11 \times (37\,500 - 40\,000) = 27\,500$ A (2) * one mark for amount and one mark for direction	10
5(b)	<p><u>Material price</u> This has improved/gone from adverse to favourable (1). As the business became more established it could negotiate a better deal (1). With the increase in production discounts were available for bulk purchases (1).</p> <p><u>Material usage</u> This has improved but is still adverse (1). Staff are new and inexperienced which leads to wastage, but their skills are improving (1).</p> <p><u>Labour rate</u> This has become less favourable (1). Staff have become unionized and now demand higher wages/higher skilled staff (1).</p> <p><u>Labour efficiency</u> This is much improved but still adverse (1). As they become more used to the job staff are able to work faster, and then can be expected to improve further (1). Per variance – (1) mark for change and max (1) for comments Accept other valid points for comments</p>	8
5(c)	It would be time consuming (1). It might only inform Tommy about changes over which he had no control (1). It would enable him to reconcile total actual cost with total standard cost/total actual profit with total standard profit (1). The fixed overhead expenditure variance would show if there had been any cost savings (1). The fixed overhead volume variance would show if fixed overheads had been under or over absorbed because of changes in output (1). Decision (1) and comments max (4) Accept other valid points	5
5(d)	Quoting prices for orders (1) Setting budgets (1) Accept other valid points	2

Question	Answer	Marks
6(d)	Any two reasonable answers for (1) each, e.g. Number of orders processed and shipped for each product. Number of staff employed for each product.	2
6(e)	It would ensure the profitability of the business (1) as it would not be possible for a product to make a loss as appears in part (c) (1) and would ensure consistency across products (1) . It would be impossible to apply when there is still disagreement as to how to apportion costs (1) and as the basis of apportionment may be subjective (1) any loss which the directors seek to eliminate may not be realistic (1) . Additional analysis may first be needed to establish the most suitable cost drivers (1) . Since the business is able to sell all its production at present, it may be better not to increase the existing selling prices (1) as demand may fall (1) . It would be useful to consider what competitors are charging for their products (1) . How would the directors decide on a rate? (1) Decision (1) and comments max (4) Accept other valid points	5
