PAPER 3 Practical Test

OCTOBER/NOVEMBER SESSION 2001

1 hour 15 minutes

Candidates answer on the question paper.

Additional materials:

As listed in Instructions to Supervisors

TIME 1 hour 15 minutes

INSTRUCTIONS TO CANDIDATES

Write your name, Centre number and candidate number in the spaces at the top of this page.

Answer **both** questions.

Write your answers in the spaces provided on the question paper.

INFORMATION FOR CANDIDATES

The intended number of marks is given in brackets [] at the end of each question or part question.

You are advised to spend 55 minutes on Question 1 and 20 minutes on Question 2.

FOR EXAMINER'S USE

1	
2	
TOTAL	

This question paper consists of 4 printed pages, 3 blank pages and a Report Form.

Question 1 [55 minutes]

You are required to investigate the effect of temperature on the enzyme urease. Urease catalyses the following reaction.

Proceed as follows:

Prepare two tins or beakers to act as water-baths. The temperature of the water in one should be about 50 °C, in the other, the water should boil. Label three test-tubes **A**, **B** and **C** respectively. Add one tablet of urease to tube **A** and place the bottom of the tube on the bench on a pad of paper or cloth.

Using a glass rod, **very gently** crush the tablet into a powder, taking care not to break the bottom of the test-tube. Repeat this procedure for tubes **B** and **C**. To each of the three tubes, add 3 cm³ of distilled water and stir to dissolve. Place tube **A** in the water-bath at 50 °C, tube **B** in the boiling water and tube **C** in a test-tube rack at room temperature.

After **five minutes**, remove tubes **A** and **B** from the water-baths and cool them under a running tap. Measure out 10 cm³ of urea solution into each of three further test-tubes.

Adjust the temperature of one water-bath to 38–40 °C, the other is no longer needed. Place tubes **A**, **B** and **C** and the three containing **urea solution** into this water-bath. After **three minutes**, tip the contents of one of the urea tubes into each of tubes **A**, **B** and **C**. Stir the contents using a glass rod. Note the time and leave these tubes in the water-bath for **30 minutes**.

Set up a burette containing **0.05 mol dm⁻³ sulphuric acid**. Label three flasks or beakers **A**, **B** and **C** respectively.

You should begin Question 2 during the 30 minute period.

After **30 minutes**, remove tubes **A**, **B** and **C** from the water-bath. Pour the contents of these tubes into the flasks or beakers similarly labelled. To each flask, add **four drops** of indicator.

- (a) Record the colour of the contents of the three flasks.

A..... **B** **C** [1]

Titrate the contents of **A**, **B** and **C** in turn with sulphuric acid. Add the sulphuric acid drop by drop, shaking gently after each drop, until an end point is reached (a grey/pink colour).

- (b) Record your results in a suitable table.

[5]

(c) Explain your results as fully as possible, using your biological knowledge.

.....
.....[5]

(d) State the ways in which you would have expected the results to be different if tubes **A** and **B** had been maintained at their respective temperatures for one hour instead of five minutes.

.....
.....
.....
.....[2]

(e) State **two** variables that are **not** controlled in your procedure that are likely to affect the rate of enzyme reaction.

..... *and*[2]

(f) Other than controlling the variables you mentioned in (e), but using the same apparatus and materials, state **three** ways in which you could obtain more reliable results if more time was available.

[Total : 18]

Question 2 [20 minutes]

Slide **K1** is a stained transverse section of the stem of a herbaceous flowering plant. Examine **K1**, using your microscope.

Fig. 2.1 shows an outline of half of the section, without any of the details.

Fig. 2.1

- (a) Draw the outlines of **all** the vascular bundles in the half section on Fig. 2.1. Your plan should show accurately the numbers of the bundles, their sizes and positions. [5]

Slide **K2** is a stained longitudinal section of the stem of the same species of plant as **K1**. Examine **K2**, using your microscope.

- (b) (i) On Fig. 2.1, indicate one possible position at which **K2** could have been taken. Label this '*position of K2*'. [1]
- (ii) Give reasons for your decision in (i) based on your observations of both slides.

[Total : 7]

REPORT FORM

The teacher responsible for this subject is asked to answer the following questions:

- (a) Was the candidate physically handicapped in drawing or using a microscope? If so, give brief details.
- (b) Was the candidate handicapped by deficient material or apparatus? If so, give brief details.
- (c) Was it necessary to make any substitutions for the materials sent from Cambridge? If so, give brief details of the circumstances.
- (d) Any comments.

Signed

N.B. Information that applies to all candidates need only be given on the first candidate's answer book.
