# Introduction

The main aim of this booklet is to exemplify standards for those teaching Cambridge International AS and A Level Business (9609), and to show how different levels of candidates' performance (high, middle and low) relate to the subject's curriculum and assessment objectives.

In this booklet candidate responses have been chosen to exemplify a range of answers. Each response is accompanied by a brief commentary explaining the strengths and weaknesses of the answers.

For each question, each response is annotated with a clear explanation of where and why marks were awarded or omitted. This, in turn, is followed by examiner comments on how the answer could have been improved. In this way it is possible for you to understand what candidates have done to gain their marks and what they will have to do to improve their answers. At the end there is a list of common mistakes candidates made in their answers for each question.

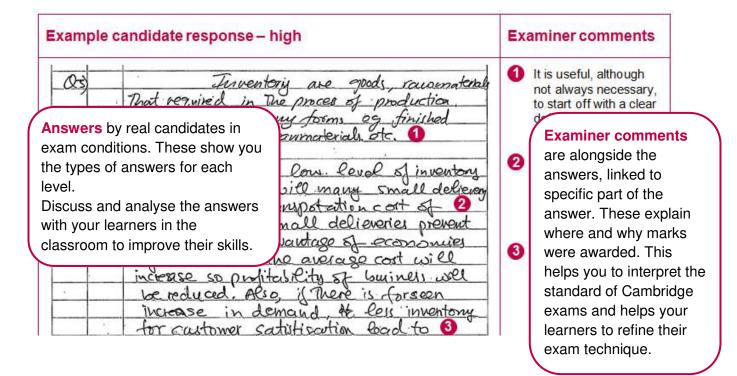

This document provides illustrative examples of candidate work. These help teachers to assess the standard required to achieve marks, beyond the guidance of the mark scheme. Some question types where the answer is clear from the mark scheme, such as short answers and multiple choice, have therefore been omitted.

The questions, mark schemes and pre-release material used here are available to download as a zip file from Teacher Support as the Example Candidate Responses Files. These files are:

# How to use this booklet

#### How the candidate could have improved their answer

The second cost of customer satisfaction is not as well benefited from acknowledging that products will be una hence leading to disappointment.

In addition, three benefits have been explained. Presur rather than foreseen but the candidate has explained s answer. This explains how the candidate could have improved their answer and helps you to interpret the standard of Cambridge exams and helps your learners to refine exam technique.

#### Common mistakes candidates made in this question

(a) Not being able to move beyond Level 2 due to not un of these two types of expenditure and the effect of this of the two expenditures and again the effect of this on the l

(b) Confusion over what classes as an internal source of sales revenue or debentures. This lists the common mistakes candidates made in answering each question. This will help your learners to avoid these mistakes at the exam and give them the best chance of achieving a high mark.

# Assessment at a glance

For Cambridge International AS and A Level Business, candidates:

• take Papers 1 and 2 only (for the Cambridge International AS Level qualification)

or

 follow a staged assessment route by taking Papers 1 and 2 (for Cambridge International AS Level qualification) in one series, then Paper 3 (for the Cambridge International A Level qualification) in a later series

or

 take Papers 1, 2 and 3 in the same examination series, leading to the full Cambridge International A Level.

All components are externally assessed.

Component	Weighting		
		AS Level	A Level
Paper 1 Short answer and essay 1 hour	15 minutes		
Section A: Four short answer questions (20 marks)		20%	10%
Section B: One essay from a choice of three questions (20 ma	arks)	_0,0	. 6 / 6
Based on the AS Level syllabus content		20%	10%
40 marks			
Paper 2 Data response 1 hour	30 minutes		
Two data response questions based on AS Level syllabus con	tent	60%	30%
60 marks			
Paper 3 Case study	3 hours		
Five questions and one essay (from a choice of two) based on study	a case		50%
Based on the additional A Level syllabus content and also assignment and understanding of the AS Level syllabus content		_	30 /6
100 marks			

Teachers are reminded that the latest syllabus is available on our public website at **www.cie.org.uk** and Teacher Support at **https://teachers.cie.org.uk** 

# Paper 3 - Case study

## Question 1

#### Example candidate response – high **Examiner comments** It is good practice for a Human resource management is the strakegic approach candidate to define key the effective management of the organization employers terms in their answer. that they help the business gain a competitive This is a good definition of human resource management. aclopting hard HRTY 2 The candidate makes 2 temporary contract effective use of the case material and recognises that the flexible approach being as their motivation used represents a 'hard' style of HRM. 3 productivity 3 In this paragraph, the Those requirements candidate makes decreasing the market share of effective links between the changes to profit margin contracts being Moreover offering introduced, the theory, Zero hours contracts could offer give and the possible impact on CJE in context, i.e. referencing will decrease labour costs the importance of 4 called no payment will be made engine quality and However, CJE operates in an competitive environments, reliability. A link is mean that employees could have made to the impact on market share. with other competitors, so they may However, the analysis sometimes, disrupting of this link could have production process which been made clearer. Furthermore, employees will be required Knowledge of zero new skills to allow flexible working. This hour contracts is demonstrated here, offer CJE the advantage of ineregoin along with an explanation of how these could reduce costs. This point could have been linked back to the objective stated earlier.

#### Example candidate response - high, continued **Examiner comments** The candidate provides decreasing labour cost per engine so some brief analysis of its protit. margins one offer competitive the impact of to increase its market share of 23%. employees learning training pris costly specially for big industrie like new skills. This is underpinned with engines manufucturing, It is also time communica reference to theory. not suitable for a competitive The chain of argument is extended to explain 6 that lower labour costs could increase profit margins and enable the firm to offer more competitive prices, leading to an increase in market share. 6 This answer demonstrates a sound understanding of theory and makes effective use of the case study by linking together the different strands of the material provided. Total marks awarded = 9 out of 10

#### How the candidate could have improved their answer

The analysis could have been developed further by extending the chains of argument presented, for example, by explaining in more detail how demotivated workers might work less effectively, which would therefore impact the quality of the engines. If engine quality were affected, this could damage CJE's reputation, resulting in lower sales and a consequent loss of market share.

# Example candidate response - middle

#### human resource management is an 1 abusiness or company that aims at reducing costs in prof-torble and merke abusiness the strategy in EJE will the pusmoss impact on different ways. First offering temporary contracts overhead costs and make will help CJE reduce 2 competitive. Zero contracts hows worked for business to pay employs only the the days that they worked and CJE can be call in employees at different times dependent demandice employees com be slack time. This will busy times than when during help reduce costs for CIE and make them competitive However the disadvantages are that many employees might have many zero contracts and so might not grailable when CJE wants them which will interrupt business operations and the levels of motivation of employees will be low as they will be than if they wir my 6

#### **Examiner comments**

- The candidate provides a partial definition, but does not relate it to the management of employees.
  - A reference to the case study material and a statement about the impact on costs, though without analysis.
- 3 Good knowledge of the possible impact of zero hours contracts, with some brief analysis. This could have linked back to the issue of profit margins identified in the case.
- 4 Knowledge of the possible negative impact on motivation, although this point could have been developed further and context given.
- A very brief answer that demonstrates understanding of a more flexible approach to human resource management, but there is limited analysis and application.

Total marks awarded = 5 out of 10

# How the candidate could have improved their answer

Although the candidate provided evidence of understanding the idea of a more flexible approach to human resource management, analysis and application were not developed in their answer. The definition of flexible HRM was only partial and references to the case study were not developed. The candidate made statements about the impact of temporary and zero hour contracts but did not develop any supporting analysis linking their ideas together. Application could have been improved by using the case study information, such as the competitive nature of the market, the impact of changes on engine quality and the low levels of profit made by CJE.

kample candidate response – low	<b>Examiner comments</b>
Human recource management is in charge of recruiting workers, Setting their wages, planning training schedules employers contract and also the Piring of workers. Not only this but an effective human resource management will find ways to reduce the labour temover rate and or absenteeism rate labour to bring them down, burnan resource management aims in motivating its staff through non-finanti non-finanti non-financial mediuators.  Consently, Cameron Tek Engines aims to cut it's cost and this is the reason that all employees are to be required to learn sk new skills to allow working unstitled workers have been given zero hour contract and they are also recruiting production employees that no for short-term temporany wastrack. This shoot-term contract is chosen as the business will not have to make a workers redurant. This is actually good because if the workers are made redurant then they can spread made image of the Engine business. At the moment they have 23% and if maket show and if redurant work make create bad epidation of workers and they always and if maket shows and if redurant makes those can full too cameron in the Engines main aim is cost-minimisation strategy. In this means that financial motivation will not be used and non-financial motivation can be done for example team work, training, job enlargement, delegation, Jobernithment and also quality citales aboutly circles are when the Salf of a firm off come came to appetite and discuss and solve any protein they have or any confusion that in Cleated delegation can be highly benefith beneficial to Concerned the Engine and umplement strategies. Rather the protein the specialist to analyse and implement strategies.	<ol> <li>A comprehensive definition of the role of human resource management.</li> <li>This links the desire to cut costs to the various changes made. The candidate is, however, just repeating elements of the case study.</li> <li>Here, the candidate analyses the benefit of using short term contracts and links this to the market share shown in Fig.1 of the case study.</li> <li>From this point on, the candidate loses focus on the question and analyses different forms of non-financial motivation. These points do not answer</li> </ol>

Example candidate response – low, continued	Examiner comments
to the low level praff) and decision making powers can stay with the manager. Manager can also concentrate on snategic planning or other important factors of the business Multitasking or multispectialists should be lined so that operations of CJE do not stop. Only trained slaff for not should be hired so that the firm can save up its costs.  In addition to this, skillfulf and those who are willing to work should be hered, who have the drive to do better and move on in their career.  Such deficated workforce will help CJE to make their human resource approach more flexible and productive.	Total marks awarded = 4 out of 10

The candidate did not focus on the impact of the changes made by CJE. Instead, much of their response discussed a range of approaches, such as quality circles and delegation, which did not answer the question. The candidate did not fully appreciate the meaning of a flexible approach to human resource management, i.e. the attempt to convert the fixed costs of employing workers into variable costs.

## Common mistakes candidates made in this question

- · Weak understanding of flexible HRM.
- Inaccurate definitions of zero hours contracts.
- Confusion between temporary and part-time contracts.
- Candidates provided analysis of the impact of the changes from the case study on the employees, but gave no analysis of how that translated into an impact on CJE in terms of, for example, productivity, labour turnover and training costs.

# Question 2

xam	ple o	candidate response – high	Ex	aminer comments
2	a	For outsourcing to AOP:  Transport cost per blade: \$200 = \$20.1	0	A calculation of the unit transport cost.
		Unit cost per blade = \$20,\$570=\$590  For increasing capacity:-  Fixed cest per blade - \$600000 - \$2002	2	A calculation of the additional unit fixed cost.
	·	Unit cost per blade=\$200, \$506-\$700  Difference= 70-590=\$1103	3	The difference in unit cost is identified. All working is shown by the candidate.
			Mai	-k  for  (a) = 6/6
2	b .	Outsourcing is the using of third party to undertake part of the procludion process instead of dains; I within the business using the firm own employeed this obvious that the unit cost of blade using outsourcing is less (\$5905 and there is a difference in unit cost of \$190. This could increase the profit margins of 6 CJE if it sells the XL1 engines at the same price. Also this could allow CJE to offer competitive prices to maintain its market share and competition	<b>4 5</b>	unit cost of outsourcing is less than building an extension. The candidate uses the calculation from part (a) to answer the question.
<u>,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,</u>	1	is high.	7	consequence for the profit margin demonstrates analysis.

#### Example candidate response - high, continued **Examiner comments** Moreover it takes total of 4 months to order and get the blader which is shorter time compared congrand to increasing capacity of extiting tactory which The candidate makes a This is a long period judgement regarding the risk of expansion if Perhaps and economic environment is always dymanic economic conditions could occur, decreasing demand for the change. engines and there is a spare capacity of in the existing expansion Some developed Morrover, Outsourcing is more flexible so analysis of the problems that could the contract between CIE and arise from expansion. decrease in This answer is increase in capacity at enhanced by the use of appropriate terms such as 'spare capacity' and 'profit margin'. be spread over the production increase the price perphlade This point could have even more, decreasing profit margins. 9 been developed furthermore, outsourcing further. Km away from the XL1 assem Further application to distance the case study. be reliable? 10 # quality and are essential reliability 12 The candidate iet engines develops their be maintained when outsourcing is used evaluation by making a recommendation that is supported by their earlier analysis and by identifying the most significant factor, using suitable to increase the production capacity as APP the case study information to support higher annual this. Lactory (3000) the opportunity to increase its sales. Moreover, outsources 13 This answer shows unit cost percurit, good understanding of relevant issues and CJE corporate objective uses case study information throughout. is to match competitores margins. ore forecasts Mark for (b) = 10/12is that data? Also some analitative data needed Total marks awarded = AOP. 13 16 out of 18

#### How the candidate could have improved their answer

The candidate made a strong case for their recommendation, using their result from **(a)** effectively. The candidate gave due consideration to both options, but the key issue of quality was only mentioned but not developed fully. Analysis could have been improved by building more extended chains of argument.

#### Example candidate response - middle **Examiner comments** per blade for CUE outsing outsourcing (a) ADP and as for the option of increasing its 1 Although this is not follows: Capacity is as stated explicitly, the candidate has clearly calculated the unit outsourcing to AOP transport cost. Annual capacity => 5000 total transport cest per blade = \$ 100,000 1 A clear method is total contracted price -3\$2 850 000 shown to arrive at the Annual Fixed costs = \$6 000 000 figure for total cost. However, the fixed total costs = \$ 100 000 + \$2.850 000 + \$6 000 000 = \$ 8 950 000 costs of the existing CJE factory should not unit costs per blade =) \$ 5 \$ 8 950 000 have been included 5000 here. 3 \$ \$1790 Unit cost calculated. OFR applies. (b) Increasing capacity of exercting factory total Yartable costs => \$ 500 x 3000 => \$ 1500 000 4 Existing fixed costs 4 custs = \$600000 + \$6,000,000 Annual Fixed included. =)\$6 600 000 ... unit costs => \$ 5,500,000 + \$ 1500 000 (Contput) 3000 blade =>\$2700 / 5 The difference in unit in unit costs difference between the two op tims cost identified. \$ 2700 - \$ 1790 => \$ 910 Answer. Mark for (a) = 4/6

#### Example candidate response – middle, continued **Examiner comments** 6 It is useful to make a turbine blade postuction 2 (d) CJE should outsource recommendation at the ADP as it will beneft fracially If they start of an answer, as this can help the increase their existing factories capacity they will incur candidate focus on the amounting to \$2700 por blade this costs auestion. It is then compares with outsourcing cost unit cost of \$1790 per important to develop a blade which means it will be profitable for them to range of points that outsourced each blade support the recommendation. will 11 0 also be assured \$910. CJE have substantia they as . 7 Knowledge of a Spanz capacity and the contractual agreement relevant factor 3 months with deliveries signed within identified. signing this means that CJE immiduately and production incressed 8 Relevant application. as they will not want long to get compares against Some brief analysis in creasing here. This point could capacity of its factory which clame of have been developed 15 months. 10 in more detail to show greater understanding of the significance of being able to increase the production of engine blades quickly. 10 The initial recommendation has been supported by subsequent commentary. Mark for (b) = 6/12Total marks awarded = 10 out of 18

#### How the candidate could have improved their answer

Although the candidate showed they understood the significance of their result from (a), their response would have benefited from further analysis of the issues and consideration of the advantages of extending the factory. The candidate's knowledge and application skills were sufficient but their chains of argument remained underdeveloped.

#### Example candidate response - low **Examiner comments** 1 The concept of unit Unit cost Average cost of outsourcing to tap = Total cost 1 cost is understood. variable costs + transport costs The annual fixed costs of the existing CJE factory should not be variable included in the 8000 calculation. 11220 6102000 7100,000 The contracted price SDOO per blade has not been included in the Unit cost of increasing factory capacity calculation of the unit 3000 cost for outsourcing production. 7.200.2 Difference = 22002 980.25 The unit variable cost has been added to the existing fixed costs and the additional fixed 2 costs before being divided by 3000. Incorrect method demonstrated. The difference in unit cost has been calculated here. Mark for (a) = 2/66 A definition given. Some application here. The candidate manipulates the case study data to make a valid point here. This is one way of 10 demonstrating application. Some brief analysis of the impact of lower unit cost on profit margin. 10 A brief answer that identifies the relevant factors but does not contain any developed analysis or make a recommendation. Mark for (b) = 4/12Total marks awarded = 6 out of 18

The candidate identified the relevant factors using the case study information in **(b)** and referring to their answer for **(a)**. The candidate could have improved their response by extending their analysis of the factors identified. For example, although the candidate recognised that outsourcing would result in earlier deliveries than increasing output, there was no analysis of this benefit. As sales have been increasing and CJE is already operating at 95 % capacity, the business risks losing sales to competitors if there is any delay in increasing output. The candidate did not make a recommendation regarding outsourcing, as required by the question.

#### Common mistakes candidates made in this question

#### 2(a)

- Including the existing fixed costs of CJE's factory in the calculation.
- Not dividing the transport cost of \$200 by 10 to find the unit transport cost.
- Not calculating the difference in unit cost between outsourcing and increasing the capacity of the existing factory.

#### 2(b)

- Not giving a balanced argument.
- Only considering their answer from (a).
- Not making a recommendation regarding outsourcing.

# Question 3

## Example candidate response – high **Examiner comments** 3. CJE directors are determined to enter the market for the supply of engines for helicopters as profit margins are substantially higher than in the market for engines for other types of aircraft. The marketing director has been negotiating with government officials in country Y where a contract could soon be signed if substantial "facilitating payments" were made directly to them in foreign bank accounts. This introduction paraphrases information from the case study and does If CJE decides to proceed with these payments, the company would not consider corporate social responsibility, which means that it would not behave ethically in its decision making by not attempting to satisfy the greatest amount of stakeholder groups possible while meeting the company's objectives. If CJE decides to proceed with these payments, the company could potentially be exposed to heavy court fines as it is against the law to take part in such actions. This could potentially mean that the already unsatisfied shareholders could stop investing in the company and potentially invest in competitors as the market CJE is operating in is highly competitive and therefore there are a lot of companies to chose from. This is because the potential court fines would very likely be substantial and this would place the company's liquidity and therefore long term prospects at risk along with all the bad publicity that could potentially be generated as a result (for example, pressure groups with national media coverage) which could lead to existing customers to stop trading with CJE. If this were to happen, sales revenue would drastically decline and therefore profit margins would be reduced as a result. not fulfil any assessment objectives. Knowledge of relevant business terms here. Understanding of the possible consequences of infringing the law, applied to the case study by linking this to the level of competition However, country Y is a rich nation that is expanding its fleet of "search and rescue" helicopters and because CDE's engines are more expensive than competitor engines and have a shorter after service agreement, the government officials are also considering competitors. As a corporate objective is to match competitors' margins, by offering facilitating payments, CDE could likely be offered the contract and because profit margins in the helicopter engine market are substantially higher, CJE could potentially raise its profit margins and satisfy its shareholders. This is because if CJE reaches its objectives, shareholders are likely to be increasingly happy to invest in the company in future and potentially offer larger capital sums for other business operations such as the potential take over or joint venture the company is considering and therefore offer potential higher future prospects for CJE, which could also result in a higher market share. and existing shareholder dissatisfaction. Further analysis of the consequences of fines. There is a welldeveloped chain of argument in this paragraph, along with some evaluation in the reference to 'substantial' fines and the drastic decline in sales revenue. Good application. which links to other data in the case study. 6 An effective

counterargument to the previous paragraph, both analytical and well-founded in the context of the case

study.

#### Example candidate response - high, continued

To conclude, I believe that CJE should not make "facilitating payments" to government officials as there could be a potential long term damage in their reputation for a short term gain. There is also no indication of how large the contract would be in comparison to existing contracts with regular customers, which in quantitative terms can not be evaluated with the regular customers, which in quantitative terms can not be evaluated with data presented.

The potantial for expensive court fines could potentially lead to a substantial loss of competitiveness due to all the bad publicity generated and the potential for lower liquidity positions which would likely place CJE in a risky cash position.

However, CJE should also consider its objectives and the interests of shareholders in this decision as there could be a potential raise in profit margins due to the higher profitability involved in the helicopter engine

# **Examiner comments**

Assessing the longterm impact is a useful way of developing evaluation. The candidate also recognises that further quantitative data would be useful in deciding whether CJE should try to get the contract.

Total marks awarded = 13 out of 16

#### How the candidate could have improved their answer

The candidate could have included further evaluative content in the main body of their answer. They could also have structured their evaluation in the final paragraph more effectively; the last sentence did not offer a strong conclusion.

Example	e candidate response – middle	Examiner comments
3	CJE is looking to enter the marked of hetropher engines and the main byen of here engines seem to be the government of country y.  CJE is having some Boves with finalising a contract due to their high prices and their short after—sales service. 1  When talking about facilitating payments, he government af Country y wants CJE to compensate them for their higher costs and trave no trave of it. (The reason for the pressor foreign bank accounts). This 2 will assure a contract for CJE to produce in country y. However, whenever to think about weller or not is worth it.  If the story get at that CJE paid the government to get let them produce in their market, it will look like	<ol> <li>This summarises the background information to this decision.</li> <li>The candidate demonstrates understanding of the use of foreign bank accounts to make the facilitating payments.</li> <li>This shows</li> </ol>
	(a) jet them produce in their monker, it will look like a brine and dealmay the image of CJE. 3  Stakeholders of CJE, Compike who show an interest in the look CDE) will make a lot of sudden decision.  Shaveholders may not invest, worker will leave so that they are aren't linked to a bad company, and word of all whomers will no longer by their product they will be posted out at the market. The One government will not	understanding of the nature of the facilitating payments.  4 This provides analysis of the consequences of making a bribe.
	invest in their production and may even take legal action against them. Stakeholders are a key part of any busines. It sets the image a business has and keeping thanks stakeholders being tan tead to high prefitability. Yes, CJE can achieve high profits in the huliuptur markets and can help expand their business to amazing heights but lanking of in my opinion, it is not worth the rik. CJE 5  Should look at other country's to expand.	5 A recommendation is made here.

- P	e candidate response – middle, continued	Examiner comments
3	Also, if (It inakes failtaking payments to the government of (IE, there's no government that their are a limited amount of payments.  Maybe with the government many onk for more payment in order to keep the their arrangement a tense secret or give them insider information. 6  CJE can be greatly affected by this decision in a lot of negative ways. The combined cost of these payments may be ligher than for eg. setting up production! It may also conflict	6 Clear supporting evidence for the recommendation, highlighting the risk that CJE would be taking.
	with their current aims and objection.	Total marks awarded =

The candidate could have improved their answer by analysing more thoroughly the benefits and disadvantages of making the facilitating payments, for example, the consequences for CJE of facing legal action and/or the impact of losing customers if an act of bribery became public. The candidate identified these issues but did not develop them.

Application to the case study could also have been developed further by referring to the competitive nature of the market. For example, the candidate could have mentioned that customers could go elsewhere, or considered whether or not CJE would need to make changes to their engine to service the helicopter market, and whether or not they would have the capacity to meet increased demand. The evaluation in the answer could also have been fuller.

#### Example candidate response - low **Examiner comments** This shows 3 Making facilitating payment be to understanding of the contractual help CJE win the role of the facilitating engines to the government. This acts as payments in securing contractual confractual negotiations a sweetener the contract. The commentary here incline to show Consour develops the answer government Lue to the payment made. The beyond merely speak. the name repeating the case have an CJE Sv com study information. contractual process Liscovered cought , the Some brief analysis of mage of CIE the possible por scented consequences if the caneelled payments become means l vose public. are not faithful government affrials bring 3 Further analysis of how enough up CJE might incur losses the contract having by acting illegally. competitor. Sever litating Cannot on illegal act A brief answer that 5 windled shows understanding of the purpose of its good making facilitating payments. However, the analysis of the benefits to CJE of winning the contract is not developed. Total marks awarded = 6 out of 16

#### How the candidate could have improved their answer

The candidate provided a brief answer that demonstrated understanding of the role of the facilitating payments in winning the contract. However, the analysis was not fully developed and there was no overall judgement about whether the payments should be made or not.

## Common mistakes candidates made in this question

- Some candidates did not understand that facilitating payments were in fact bribes.
- Some candidates only focused on the negative results of making bribes. Although candidates were
  correct to consider the negative aspects of paying bribes / condemn the use of bribery, they also needed
  to consider the implications for the company of not making these payments and losing a lucrative
  contract / making the payments and winning a lucrative contract
- Some candidates misinterpreted the material in the case study, for example, analysing the implications of CJE moving its operations to country Y.

# Question 4

#### **Examiner comments** Example candidate response – high The correct equation operating profit margin = for calculating operating profit margin is given here. An accurate calculation of operating profit with a clear method shown. An accurate calculation of revenue with a clear method. long-term trabilities 1.00 0/1 A correct calculation constal employed with a correct unit of measurement. Mark for (a)(i) = 4/4600 Georga ratio A correct formula. 1295 +64 8 Adding additional sales revenue is incorrect here. As the candidate uses by the company of its accounting statements the figure calculated above, the own figure rule applies here. 8 A partially correct calculation of capital employed. Intangible the opportunity of for non-current assets are not included. Proposed change to depreciation he maintained 10 is not included. Mark for (a)(ii) = 1/4profits by not increasing 9 This shows application as it uses data from the share holders objectives of increasing case study to compare the operating profit margin before and after the proposed changes. The benefit of making changes is briefly analysed here.

#### Example candidate response - high, continued **Examiner comments** 11 A recognition of how short-term protite and increased profit might the book value of non current assets benefit CJE. will increase from \$1250 m This shows understanding of the gearing ratio, but the calculation of current gearing (before the proposed changes) is will give an advantage incorrect. The candidate shows from banks limited judgement in ratio is georina identifying that the change is not so they are both good 12 significant. some stakeholders may view these Knowledge of window as window-dressing so that CUE accounts dressing here. An analysis of the benefit of not giving major customer for early shipment discount. Fore example discounts are not 15 The candidate makes a judgement here but profit margin of more than includes limited support for it. should not adjust 16 The candidate demonstrates good knowledge and application in this answer, but the presented to shareholders & so that analysis and evaluation they could be more persuaded are not developed and instead of ordinsting remain in Level 1. Mark for (b) = 8/12Total mark awarded = 13 out of 20

#### How the candidate could have improved their answer

The candidate used their answer for (a) effectively and developed some of their analysis of the issues in (b). However, most of the analysis was not sufficiently extended and contained only one or two links. The response contained some evaluation, but this was underdeveloped. The candidate did not fully understand the impact of the proposed adjustments; for example, the case study accounting forecasts predict that the value of non-current assets will increase to \$1 295m. The candidate recognised that the adjustments involve window dressing, but did not explain the impact of the change to depreciation.

# Example candidate response – middle

4	b) Stoicholders which can be benefited in the long our due to greater investments in the fibre and higher purps mergyn. 7	The candidate makes a limited judgement here, but this lacks supporting evidence.
		Mark for (b) = $4/12$
		Total marks awarded = 6 out of 20

This candidate needed more practice making amendments to financial data and manipulating balance sheet data to calculate capital employed.

The response for **(b)** was hampered by the missing calculations in **(a)**. However, even without these calculations, the candidate could have developed their analysis of how the proposed adjustments might benefit CJE, as the Finance Director clearly believed that there would be an increase in sales and operating profit margin. Recognition that the proposed adjustments included window dressing would have enabled the candidate to discuss the potential outcome with regard to shareholder attitudes. The candidate's limited understanding of the relevant issues made it harder for them to develop their evaluation.

#### Common mistakes candidates made in this question

Candidates should practice making amendments to financial data and manipulating balance sheet data to calculate capital employed.

#### 4(a)

- Candidates amended the revenue but made no corresponding amendment to operating profit.
- Candidates based the operating profit margin calculation on data before the proposed adjustments.
- Candidates were uncertain about how to calculate capital employed from the given data.

#### 4(b)

- Candidates included evaluation unsupported by argument or evidence.
- Some failed to identify the issue of window dressing.
- Some misunderstood the impact of depreciation; candidates commonly stated that a reduction in depreciation would increase the finance available for investment. Some candidates argued that the adjustment to depreciation would enhance the value of assets when sold.

# Question 5

#### Example candidate response - high

5) Assess the usefulness of the forecasts in Appendix 1 to any two functional departments of CIE (16)

There are four functional departments in business, Marketing, Finance, Human Resources and Operations. The data in Appendix 1 could have many effects on all of these departments, however in this essay i will concentrate on the HR department and the Finance department.

The HR department is responsible for the strategic planning of a workforce so that the firm can gain a competitive advantage. The HR department is concerned with recruitment, selection development and labour costs amongst other things. Firstly, the HR department will find the annual growth in labour costs useful.

By using appendix 1, the HR department can see the growth in labour costs in European countries and the BRICS countries. I think that this is beneficial because it will give the HR department an idea of what labour costs are likely to be if they enter either a European country or a BRICS country. EU countries have an annual growth in labour costs of 8% and I would assume this would regard wages. In contrast the BRICS countries have a relatively low annual growth in labour costs. By using these figures, the HR department can approximate which countries will be more expensive in terms of wages than others.

This can help the HR department contribute to strategic decisions based on cost. This is important because increasing labour costs will lead to shrinking profit margins, unless these increases in costs are accompanied by increases in productivity. CJE would become less competitive the higher its labour costs are.

Therefore by using these figures it is clear to see that it would be cheaper for the HR department if operations were to take place in the BRICS countries rather than EU countries because wage and labour costs are lower. These figures are however an estimate and although the HR department and the whole of CIE should take heed of them, they are not necessarily correct. In addition to this, the information given assumes that labour costs will rise at a steady rate. This however is not true because trade unions can demand higher wages and governments can set higher wages. Furthermore there is no information on the productivity of workers in these countries. For example, if the annual growth in productivity in EU countries is 20% whereas in Brics countries it is 0.5%, then realistically labour costs would be cheaper in EU countries. Therefore the actual importance of these labour costs figures to the HR department is limited. Although they are good for comparison, they do not take into account all countries and therefore is not representative of the whole world i.e. HR cannot make the best informed decisions because of the quality of this data and the amount of data that is missing.

The finance department will also find these figures useful; they will be very interested in the 'average increase in global interest rates over period'. They will be interested in this because interest rates can be very important especially if the business has many liabilities, which it does. The firm has 600m in long term liabilities. The finance director must know the interest rates because they dictate how much must be paid to people who have lent to CJE. The finance department could therefore use this figure to make strategic decisions based on how much interest will cost them.

By being aware of these figures, the Finance department can plan ahead. This would involve setting budgets, paying of debts and perhaps borrowing more (when interest rates are low). This would increase the surrvivability and profitability of the business if the finance department plans for changes in interest rates. However, this figure is for the whole world and this decreases its value in terms of use. The finance department will want to know individual countries interest rates so that they can make informed decisions on where to borrow from.

#### **Examiner comments**

- 1 Knowledge of functional departments.
- 2 Awareness of the usefulness of information about growth in labour costs to HR.
- Analysis of the impact of increasing labour costs. The candidate could have highlighted how this might be used by HR.
- 4 The forecasts do not show this; they only provide evidence of the growth in labour costs.
- 5 The candidate demonstrates understanding of the limitations of the data; their judgement is supported through developed chains of argument.
- 6 Application to the case study.
- Links could have been made to the strategic options for growth and the impact on financing of a change in interest rates.
- Analysis of the usefulness of forecasts to the finance department, along with evaluative comment.

#### Example candidate response – high, continued

I would suggest that rather than looking at this figure with such weighting, the finance department use discount factors and accounting methods in order to work out things such as NPV and other interest payments. This would be more accurate. In addition, the global forecasts are over four years and it is unlikely that these figures will stay the same over this time period because economic climates are very fragile and can change instantly.

Overall I believe that these figures are of limited use simply because the figures are forecasted i.e. they are estimates, there is no reliable source for the data and because they are not specific. In other words there are many important factors that the two departments should consider. The HR and Finance department would be better off looking at figures the lirectly concern the business i.e. if CJE has factories in Peru, then the EU and BRICS data will be completely useles Between the two functions though, I think that the HR department will find the figures of most use because they directly employ labour. The HR dept would be better off doing a workforce Audit rather than completely trusting these figures. This allows them to plan according to the needs of the business effectively

In addition to this, although average global interest rates may be 4%, they will vary between individual countries. For example, Englands interest rate is currently very low however this can change. The data is subject to volatility and therefore I think that the data should be taken lightly, perhaps as a guidline for some sort of planning, budgeting and decision making.

#### **Examiner comments**

- 9 Further evaluation.
- 10 The candidate could have focused here on the case study information: location of factories and strategic options, for example.
- Further evaluation.

Total marks awarded = 15 out of 16

#### How the candidate could have improved their answer

The candidate demonstrated clear understanding of the usefulness of the data to functional departments. The evaluation was particularly well developed, both in the body of the answer and in the conclusion. The candidate could have included further analysis of how the functional departments might use the data in decision-making and planning.

	able to suf produce more output. to sufish CSF's automers 5	Total mark awarded = 5 out of 16

Analysis of the usefulness of the labour data was underdeveloped in this answer. The candidate could have shown applied understanding by linking this data to decisions regarding strategic growth options or whether the finance/operations/human resources department(s) would recommend shifting operations to take advantage of the slower growth of labour costs in the European Union compared with the BRICS countries.

The candidate could have developed their analysis of how marketing could focus more on sales to Asian aircraft manufacturers, since their market share is projected to increase.

#### Common mistakes candidates made in this question

- The relevance of the forecast growth in the market share of Asian aircraft manufacturers was
  misunderstood; some candidates considered the aircraft manufacturers to be competition for CJE rather
  than their customers.
- External costs were incorrectly defined and changes to maximum permitted pollution levels misunderstood. Some candidates were not familiar with index numbers.
- Some candidates failed to refer to any functional departments in their answers, or referred to only one functional department.

The analysis is not

developed in this

paragraph.

# Question 6

effective machine to be made.

#### Example candidate response – high **Examiner comments** 6) Recommend to CIE's board of directors which one of the two strategic options the company should choose. Justify your reccomendation (20) Strategic choice is the process of deciding which option will be the most beneficial to the business when given a number of strategies/activities to choose from. This will involve the business using Ansoff's Matrix, decision trees and force field analysis. In this essay I will concentrate on the data in Table 3 and the Strategic options tab. I will A useful introduction stress the use of Ansoff's matrix, decision trees and force field analysis and other factors that CIE should use when which recognises that making this decision. this question is about strategic choice. The Firstly CJE should consider Risk when making a decision. They can do this by using Ansoff's Matrix. This matrix candidate identifies outlines which strategies involve what degree of risk; there are four strategies, market penetration, market relevant strategic development, product development and diversification. This is beneficial because the Ansoff's matrix can help when making strategic decisions as it outlines risk - if the project is less risky then it would be good to take it, choice techniques. however if the project is very risky then it may be less than ideal. It all depends on how safe CJE want to be and their growth strategy. 2 Descriptive understanding of Strategy 2 involves making establishing a joint venture with a USA based jet engine manufacturer. This would lead to the design and manufacture of a new jet engine with a low environmental impact. This is a medium risk strategy Ansoff's matrix. because the firm is familiar with the the product i.e. a Jet engine, however it is less familiar with the African market where it would be designed and manufactured. I would therefore class this strategy as market development. CJE Application of Ansoff's and Z&L would have to carry out lots of market research into this African country such as labour costs, the matrix to strategy 1. economic environment, Political stances, legal constraints etc...

Overall, this strategy is of medium risk because both Z&I, and CIE know their product well and as a result they will

In contrast to this, strategy 1 involves taking over a small manufacturer in a BRICS country and this manufacturer is

benefit from core competencies, economies of scale and their combined knowledge. This will allow for a cost

#### Example candidate response - high, continued

designing new jet planes. This is expected to be populat in LIC's, however CJE is not familiar with creating aircraft because their specialism is engines. As a result, this strategy is of the highest risk because it is in a new market and is based on a somewhat new product. This would involve the diversification of CJE. This is risky because it would involve masses of market research into the market, consumer behaviour, cultural factors & it would also include costly R&D into how to make a safe new het plane. Once CJE has identified the risks involved they should use other strategies such as Force Field analysis. 4

Force Field analysis works by weighting restrainers and drivers. The outcome which has the highest weighting should be chosen. In Strategy 1 the greatest restraining factor is the lack of CJE directors experience in aircraft manufacture, and the greatest driver is the vertical integration that would become of this strategy. With strategy I personally believe that the restrainers outweigh the driving factors. I think this because it would cost a lot more money to branch off into making jet planes (which has high fixed costs and low profit margins). Before this decision is made though, Z&L and CJE should concentrate on strengthening the drivers and dampening the restrainers. They can do this by carrying out market research, by creating project teams between firms, by using effective two way communication and by assigning project champions. If these steps are taken, then together, the increase in drivers and decrease in restrainers will allow for a more obvious decision. This method is useful because it gives a quantitative answer which aids in decision making - however this method doesn't take into account other factors such as risk. But, if CJE carries out an analysis of Ansoff's Matrix along with Forcefield analysis, the choice should be effective.

By taking strategy 1 I believe that CJE would incur the most costs. I believe this because it is incredibly risky, there is a low forecast IRR, there is a low expected monetary value associated with success in comparison to strategy 2 and the restraining factors outweigh the drivers greatly from my perspective. I think that it would be way more beneficial to CJE to create a joint venture with Z&L because the strategy involves a lot less risk, it is cheaper, the forecast returns are higher, the ecpected monetary value if successful is higher and there is great cost savings to be made in African countries. Although the estimated chance of strategy failure is 40%, strategy 2 would be more beneficial because the costs to the business are spread between two firms and there are greater returns expected from success.

However, before CJE take my recommendation I would suggest that they partake in strategic analysis first simply because it will allow them to plan. For example, I think that before the choice is made CJE should take into account SWOT i.e. their strengths, weaknesses, opportunities and threats. It is evident that their strengths are in manufacturing engines and therefore from my perspective it makes little sense to diversify by making aeroplanes because that is not where the firms specialisms lie. CJE would be better off concentrating on their core competencies because that will allow the firm to blossom and it will decrease their chances of failure as a firm.

In addition to this, before the decision is made CJE should also carry out a PESTLE analysis into the two countries. For example, in Africa (strategy 2) the political, legal, social and economic environment are likely to be very poor in comparison to a BRICS country. This is because of things such as terrorism, low growth, lack of spending and legal/political constraints by dictators. Although it may be cheaper to produce in an african country, it may not be safer/financially viable than producing in a BRICS country where there is high growth.

There are many factors the CJE should take into account when making this decision. CJE should consider all things however I would stress the weighting on actual facts which can be gained from SWOT, PESTLE and porter's 5 forces analysis. The most important factor in my opinion is the PESTLE environment of the country that will be operated in. I think this because the economic and politial environment of a country can determine prices, costs, what the firm can produce, whether CJE will get grants for producing, what the level of tax may be and so on.

Therefore in conclusion I would suggest that CIE take strategy 2 because I believe that the cost advantages and estimated profits of this strategy outwiegh all other factors. However, whether this strategy is effective depends on how CIE and Z&L cooperate, how they plan and how they function. It is important that they function as one business entity, have a strict plan, have budgets and a motivated workforce. To do this, the two firms, once a decision is chosen should make sure that everything is implemented properly by creating and communicating a vision, creating project teams and by setting a project champion to motivate and empower - this is what will guarantee success for CIE if they take my recommendation of strategy 2.

#### **Examiner comments**

- 4 Understanding of strategy 2. Ansoff's matrix applied.
- 5 Repetition of information from the case study.
- The candidate has lost focus on the question and describes strategic implementation. They should demonstrate how this helps make the decision.
- Evaluation of the usefulness of the technique.
- 8 Application.
- 9 Application.
- 10 Analysis and evaluation.
- 1 Evaluation.
- Further evaluative comment.
- The candidate makes a final evaluation, recognising the factor that success will depend on.

Total marks awarded = 13 out of 16

# How the candidate could have improved their answer

There was a strong focus on strategic choice techniques in the candidate's answer. However, it was often descriptive rather than analytical. Although there was some effective evaluation in the body of the answer and particularly in the conclusion, it could have included more detailed analysis of the data in Table 3.

Example candidate response – middle	Examiner comments
Stalegy 1, according to 15 product cleritopment according to ansoft matrix as CJE will sell  According to ansoft matrix as CJE will sell  According to ansoft matrix is a few products in a strategy 1, according to ansoft matrix is diversification as it will sell new products in  New markets.
