Paper 2 Structured Questions AS Core

May/June 2012

1 hour 15 minutes

Candidates answer on the Question Paper.

Additional Materials: Data Booklet

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

You may lose marks if you do not show your working or if you do not use appropriate units.

A Data Booklet is provided.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 11 printed pages and 1 blank page.

Answer all the questions in the spaces provided.

Although the actual size of an atom cannot be measured exactly, it is possible to measure the distance between the nuclei of two atoms. For example, the 'covalent radius' of the Cl atom is assumed to be half of the distance between the nuclei in a Cl_2 molecule. Similarly, the 'metallic radius' is half of the distance between two metal atoms in the crystal lattice of a metal. These two types of radius are generally known as 'atomic radii'.

The table below contains the resulting atomic radii for the elements of period three of the Periodic Table, Na to Cl.

element	Na	Mg	Αl	Si	Р	S	Cl
atomic radius/nm	0.186	0.160	0.143	0.117	0.110	0.104	0.099

(a)	(i)	Explain qualitatively this variation in atomic radius.	
	(ii)	Suggest why it is not possible to use the same type of measurement for argon, Ar	:
			 41

(b) (i) Use the *Data Booklet* to complete the following table of radii of the cations and anions formed by some of the period three elements.

radiu	s of catio	n/nm	radiu	s of anior	n/nm
Na⁺	Na ⁺ Mg ²⁺ A <i>l</i> ³⁺			S ²⁻	C1-

(ii)	Explain the differences in size between the cations and the corresponding atoms.
(iii)	Explain the differences in size between the anions and the corresponding atoms.
	[5]
	ch of the elements Na to Cl forms at least one oxide. Na ₂ O is an ionic oxide, SO ₂ is a alent oxide. Both oxides react with water.
(i)	Write an equation for the reaction of each of these oxides with water.
	Na ₂ O
	SO ₂
(ii)	What is the pH of the resulting solution in each case?
	Na ₂ O SO ₂
(iii)	Write an equation for the reaction that occurs between the products of your reactions in (i).
	[5]

2 Washing soda is hydrated sodium carbonate, Na₂CO₃xH₂O.

A student wished to determine the value of x by carrying out a titration, with the following results.

5.13 g of washing soda crystals were dissolved in water and the solution was made up to 250 cm³ in a standard volumetric flask.

 $25.0\,\mathrm{cm^3}$ of this solution reacted exactly with $35.8\,\mathrm{cm^3}$ of $0.100\,\mathrm{mol\,dm^{-3}}$ hydrochloric acid and carbon dioxide was produced.

(a) (i) Write a balanced equation for the reaction between Na₂CO₂ and HC1.

· / · /		- 2 3	

(ii) Calculate the amount, in moles, of HCl in the 35.8 cm³ of solution used in the titration.

(iii) Use your answers to (i) and (ii) to calculate the amount, in moles, of Na₂CO₃ in the 25.0 cm³ of solution used in the titration.

(iv) Use your answer to (iii) to calculate the amount, in moles, of Na₂CO₃ in the 250 cm³ of solution in the standard volumetric flask.

© UCLES 2012 9701/23/M/J/12

(v) Hence calculate the mass of Na_2CO_3 present in 5.13 g of washing soda crystals.

For Examiner's Use

[6]

(b) Use your calculations in (a) to determine the value of x in $Na_2CO_3.xH_2O$.

Examiner's
Use

- With the prospect that fossil fuels will become increasingly scarce in the future, many compounds are being considered for use in internal combustion engines. One of these is DME or dimethyl ether, CH₃OCH₃. DME is a gas which can be synthesised from methanol. Methanol can be obtained from biomass, such as plant waste from agriculture.
 - (a) Define, with the aid of an equation which includes state symbols, the standard enthalpy change of combustion, $\Delta H_c^{\rm e}$, for DME at 298 K.

quation
efinition
[3]

(b) DME may be synthesised from methanol. Relevant enthalpy changes of formation, $\Delta H_{\rm f}^{\rm e}$, for this reaction are given in the table below.

compound	ΔH ^e _f /kJ mol ⁻¹
CH₃OH(I)	-239
CH ₃ OCH ₃ (g)	-184
H ₂ O(I)	-286

Use these values to calculate $\Delta H_{\text{reaction}}^{\bullet}$ for the synthesis of DME, using the following equation. Include a sign in your answer.

$$2CH_3OH(I) \rightarrow CH_3OCH_3(g) + H_2O(I)$$

$$\Delta H_{\text{reaction}}^{\bullet}$$
 =kJ mol⁻¹ [3]

© UCLES 2012 9701/23/M/J/12

(c)	DME and ethanol are	isomers with	the molecular	formula	C_2H_6O .
-----	---------------------	--------------	---------------	---------	-------------

(i)	Draw the	displayed	formula	of DME	and of	ethanol.
1 . /	DIAW IIIC	aiopiayoa	IOIIIIaia		aria oi	Cultulion

	othonol
DME	ethanol

(ii)	What type	of isomerism	do DME	E and	ethanol	show?
------	-----------	--------------	--------	-------	---------	-------

[2]

(d) DME is a gas at room temperature while ethanol is a liquid.

(i)	Which intermolecular force exists between ethanol molecules, which causes ethanol
	to be a liquid at room temperature?

(ii) Draw a diagram that clearly shows this intermolecular force.

Your diagram should show any lone pairs or dipoles present that you consider to be important. You should represent at least two molecules in your diagram.

But-2-ene, CH₃CH=CHCH₃, is an important compound which is obtained from the cracking of hydrocarbons present in crude oil.

(a)	Give two different conditions under which long chain hydrocarbons may be cracked.

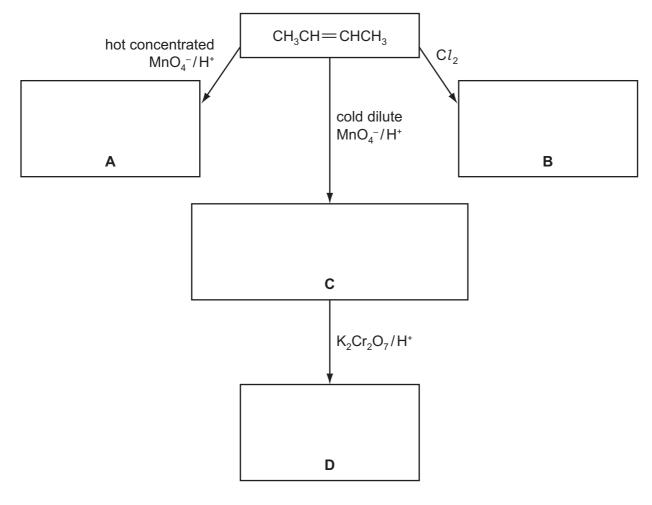

(b) Dodecane, C₁₂H₂₆, is a long chain hydrocarbon which is present in crude oil and which can be cracked to form but-2-ene and an alkane.

Write a balanced equation for this reaction.

.....[1]

(c) Some reactions of but-2-ene are shown below.

In the boxes below, give the **structural** formulae of the organic compounds **A** to **D**.

[4]

For Examiner's Use

(d)	(i)	Draw the skeletal formula of compound D .
	(ii)	By using the letters A to D as appropriate, identify those compounds which are chiral. If there are none, write 'none'.
		[3]
(e)	But	-2-ene can be polymerised to give poly(butene).
		w the structural formula of a portion of the polymer chain in poly(butene) showing repeat units.
		[1]
(f)		npound C is a liquid which can be reacted with concentrated sulfuric acid to give a , E , which will decolourise aqueous bromine when passed through it.
	(i)	Suggest the structural formula of E .
	(ii)	Suggest the structural formula of the product of the reaction between E and an excess of bromine.
	(iii)	What type of reaction occurs between E and an excess of bromine?

For Examiner's Use

Many naturally occurring organic compounds contain oxygen. Such compounds may contain alcohol, aldehyde, carboxylic acid, ester or ketone functional groups. These functional groups may be identified by their reactions with specific reagents.

Compound ${\bf F}$ is a white solid which has the molecular formula ${\bf C_3H_6O_3}$.

Compound ${\bf F}$ is soluble in water. Addition of NaHCO $_3$ to this solution produces a colourless gas, ${\bf G}$, which turns lime water milky.

,	, - ,	,	
(a)	(i)	What is the identity of the gas G ?	
	(ii)	What functional group does this test show to be present in F ?	
			[2]
(b)		en ${\bf F}$ is heated with concentrated sulfuric acid, a colourless liquid ${\bf H}$ is produced. en cold dilute acidified KMnO ₄ is shaken with ${\bf H}$, the solution becomes colourless	
	(i)	What <i>type of reaction</i> occurs when H is formed from F ?	
	(ii)	Use your answers to (a)(ii) and (b)(i) to deduce the structural formula of the colourle	ess

[4]

liquid **H**.

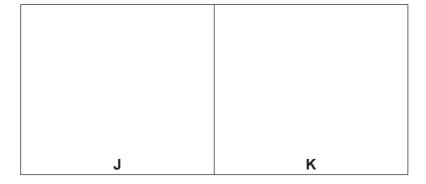

For Examiner's Use

(c) Compound F will react with sodium.

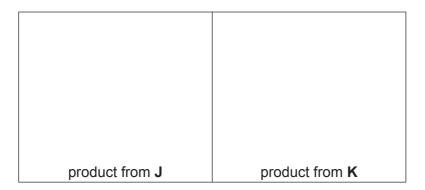

Calculate the volume of H_2 , measured at room temperature and pressure, which will be produced when $0.600\,\mathrm{g}$ of \mathbf{F} is reacted with an excess of Na.

[4]

- (d) There are two structural isomers of **F** that give the reactions described in (a) and (b).
 - (i) Suggest two structural formulae for these isomers.

(ii) Isomers **J** and **K** can both be oxidised. What will be produced when **each** of the isomers **J** and **K** is heated under reflux with acidified K₂Cr₂O₇?
