## CHEMISTRY

Paper 3 Advanced Practical Skills 2

You must answer on the question paper.
You will need: The materials and apparatus listed in the confidential instructions

## INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

## INFORMATION

- The total mark for this paper is 40 .
- The number of marks for each question or part question is shown in brackets [ ].
- The Periodic Table is printed in the question paper.
- Important values, constants and standards are printed in the question paper.
- Notes for use in qualitative analysis are provided in the question paper.

This document has 16 pages. Any blank pages are indicated.

## Quantitative analysis

Read through the whole method before starting any practical work. Where appropriate, prepare a table for your results in the space provided.

Show the precision of the apparatus you used in the data you record.
Show your working and appropriate significant figures in the final answer to each step of your calculations.

1 Calcium carbonate reacts with hydrochloric acid to release carbon dioxide.

$$
\mathrm{CaCO}_{3}(\mathrm{~s})+2 \mathrm{HCl}(\mathrm{aq}) \rightarrow \mathrm{CaCl}_{2}(\mathrm{aq})+\mathrm{CO}_{2}(\mathrm{~g})+\mathrm{H}_{2} \mathrm{O}(\mathrm{I})
$$

The concentration of the hydrochloric acid can be determined by reacting it with calcium carbonate and measuring the volume of carbon dioxide formed.

FB 1 is hydrochloric acid, HCl .
FB 2 is calcium carbonate, $\mathrm{CaCO}_{3}$.
(a) Method

- Fill the tub with tap water to a depth of approximately 5 cm .
- Fill the $250 \mathrm{~cm}^{3}$ measuring cylinder completely with water. Hold a piece of paper towel firmly over the top, invert the measuring cylinder and place it in the water in the tub.
- Remove the paper towel and clamp the inverted measuring cylinder so the open end is in the water just above the base of the tub.
- Using the $50 \mathrm{~cm}^{3}$ measuring cylinder, transfer $50 \mathrm{~cm}^{3}$ of FB 1 into the flask. Check that the bung fits tightly into the neck of the flask, clamp the flask and place the end of the delivery tube into the inverted $250 \mathrm{~cm}^{3}$ measuring cylinder.
- Remove the bung from the neck of the flask. Tip all the FB 2, from the container, into the acid in the flask and replace the bung immediately. Remove the flask from the clamp and swirl it to mix the contents.
- Replace the flask in the clamp. Leave for several minutes, swirling the flask occasionally.

## You may wish to start Question 3 while the gas is being produced.

- When the reaction stops producing gas, record the final volume of gas in the measuring cylinder.

## Keep the flask and contents for use in 1(c)(i).

volume of gas =
$\mathrm{cm}^{3}$ [2]

## (b) Calculations

(i) Calculate the amount, in mol, of carbon dioxide collected in the measuring cylinder. (Assume that 1 mol of gas occupies $24.0 \mathrm{dm}^{3}$ under these conditions.)

$$
\begin{equation*}
\text { amount of } \mathrm{CO}_{2}= \tag{1}
\end{equation*}
$$

(ii) Use your answer to (b)(i) and the equation on page 2 to calculate the concentration, in $\mathrm{moldm}^{-3}$, of hydrochloric acid in FB 1. Show your working.
concentration of $\mathrm{HCl}=$ $\qquad$ $\mathrm{moldm}^{-3}$
(c) (i) A student thinks that the mass of FB 2 should be measured.

Explain, by observing the contents of the flask, why this is not necessary.
$\qquad$
$\qquad$
$\qquad$
(ii) In this experiment some carbon dioxide is lost before the bung is replaced.

Suggest a change that could be made to minimise the loss of gas. Explain how this change minimises the loss of gas.
$\qquad$
$\qquad$
$\qquad$
[Total: 8]

2 In this experiment you will use a thermometric method to determine the concentration of a sample of alkali. You will mix varying volumes of acid with a fixed volume of the alkali and measure the temperature rises that occur.

You will use your experimental data to calculate the enthalpy change for the neutralisation of the acid with alkali.

FB 3 is aqueous sodium hydroxide, NaOH .
FB 4 is $2.20 \mathrm{moldm}^{-3}$ hydrochloric acid, HCl .

## (a) Method

- Support the cup in the $250 \mathrm{~cm}^{3}$ beaker.
- Use the thermometer to measure the initial temperature of FB 3.

$$
\text { initial temperature of FB } 3 \text { = }
$$

- Fill a burette with distilled water.
- Fill the other burette with FB 4. Label this burette FB 4.
- For Experiment 1, use the $10 \mathrm{~cm}^{3}$ pipette to transfer $10.0 \mathrm{~cm}^{3}$ of FB 3 into the cup.
- Add $9.00 \mathrm{~cm}^{3}$ of distilled water from the burette into the same cup.
- Add $1.00 \mathrm{~cm}^{3}$ of FB 4 from the other burette into the same cup.
- Stir the mixture and use the thermometer to measure the maximum temperature obtained.
- Record the maximum temperature in the table.
- Empty and shake dry the cup ready for use in Experiment 2.
- Repeat the method using $10.0 \mathrm{~cm}^{3}$ of FB 3 for each experiment and the volumes of water and FB 4 shown in the table. In each case, measure and record the maximum temperature.

Table 2.1

| experiment | volume water <br> $/ \mathrm{cm}^{3}$ | volume FB 4 <br> $/ \mathrm{cm}^{3}$ | maximum <br> temperature $/{ }^{\circ} \mathrm{C}$ |
| :---: | :---: | :---: | :---: |
| 1 | 9.00 | 1.00 |  |
| 2 | 7.00 | 3.00 |  |
| 3 | 5.00 | 5.00 |  |
| 4 | 3.00 | 7.00 |  |
| 5 | 1.00 | 9.00 |  |
| 6 |  |  |  |
| 7 |  |  |  |

| I |  |
| :---: | :--- |
| II |  |
| III |  |
| IV |  |
| V |  |

Carry out two further experiments which will enable you to determine more precisely the volume of FB 4 that gives the highest maximum temperature.

Record your measurements for these two experiments in the table.
(b) Plot a graph of the maximum temperature reached ( $y$-axis) and the volume of FB 4 used ( $x$-axis).
The scale on the $y$-axis should include a temperature $2^{\circ} \mathrm{C}$ above the highest maximum temperature reached. Circle any points you consider to be anomalous.

| I |  |
| :---: | :---: |
| II |  |
| III |  |
| IV |  |

Draw two straight lines of best fit on your graph. One line should show where the maximum temperature recorded was increasing. The other line should be after the highest maximum temperature. Extrapolate both lines so that they intersect.
Use your graph to determine the volume of FB 4 that reacts with $10.00 \mathrm{~cm}^{3}$ of FB 3.
(c) (i) Give your answers to (c)(ii), (c)(iii), (c)(iv) and (c)(v) to an appropriate number of significant figures.
(ii) Calculate the amount, in mol, of hydrochloric acid in the volume of FB 4 in (b). If you were unable to determine an answer to (b) use $4.10 \mathrm{~cm}^{3}$ as the volume of FB 4.
amount of $\mathrm{HCl}=$ mol [1]
(iii) Use your answer to (c)(ii) and the information on page 4 to calculate the concentration, in mol dm ${ }^{-3}$, of sodium hydroxide in FB 3.

$$
\text { concentration of } \mathrm{NaOH}=
$$

$\qquad$ moldm ${ }^{-3}$
(iv) Calculate the energy released when the volume of FB 4 in (b) is neutralised by sodium hydroxide. Show your working.
(Assume that 4.18 J of energy changes the temperature of $1.0 \mathrm{~cm}^{3}$ of solution by $1.0^{\circ} \mathrm{C}$.)
energy released =
(v) Use your answers to (c)(ii) and (c)(iv) to calculate the enthalpy change of neutralisation, in $\mathrm{kJ} \mathrm{mol}^{-1}$, for 1.0 mol of hydrochloric acid.
enthalpy change $=$ $\qquad$
(d) (i) The theoretical value of the enthalpy change of neutralisation is $-57.6 \mathrm{~kJ} \mathrm{~mol}^{-1}$.

Calculate the percentage error in your value of the enthalpy change from (c)(v). Show your working.
(Assume that the conditions under which you carried out your experiment in (a) are identical to the conditions used to determine the theoretical value.)
percentage error $=$ \% [1]
(ii) Suggest one modification to the procedure used in (a) that would give a more accurate value for the enthalpy change of neutralisation.

Do not suggest any modifications to apparatus in your answer.

$\qquad$
$\qquad$
$\qquad$

## Qualitative analysis

For each test you should record all your observations in the spaces provided.
Examples of observations include:

- colour changes seen
- the formation of any precipitate and its solubility (where appropriate) in an excess of the reagent added
- the formation of any gas and its identification (where appropriate) by a suitable test.

You should record clearly at what stage in a test an observation is made.
Where no change is observed you should write 'no change'.
Where reagents are selected for use in a test, the name or correct formula of the element or compound must be given.

If any solution is warmed, a boiling tube must be used.
Rinse and reuse test-tubes and boiling tubes where possible.
No additional tests should be attempted.

3 Half fill the $250 \mathrm{~cm}^{3}$ beaker with water, heat until the water is nearly boiling and then turn off the Bunsen burner. This is your hot water bath for use in (a)(i).
(a) You are provided with aqueous solutions FB 5, FB 6, FB 7 and FB 8. The solutions are known to be hydrochloric acid, hydrogen peroxide, methanoic acid and sulfuric acid. All the solutions have the same concentration.

Note: the order of FB 5 to FB 8 does not correspond to the order of identities given above.
(i) Carry out the following tests using a 2 cm depth of each reagent in a test-tube. Record your observations in Table 3.1.

Table 3.1

(ii) Use your observations to complete the sentences. Explain your answer.

FB 7 is $\qquad$ . .

FB 8 is $\qquad$ . .
explanation $\qquad$
$\qquad$
(iii) Carry out one additional test that allows you to distinguish between FB 5 and FB 6.

Record your test and the result you obtained.

FB 5 is $\qquad$ .. .

FB 6 is .. .
(iv) Write an ionic equation for the reaction of magnesium with FB 5 . Include state symbols.
$\qquad$
(v) Describe the observations that you would expect to see if the tests in (a)(i) were repeated using aqueous ethanoic acid.
observation with magnesium $\qquad$
$\qquad$
observation with acidified aqueous potassium manganate(VII) $\qquad$
$\qquad$
(b) FB 9 is an aqueous solution containing one cation from those listed in the Qualitative analysis notes.

Carry out tests that would identify the cation present in FB 9. Record your tests, observations and the identity of the cation.

The cation is

## Qualitative analysis notes

## 1 Reactions of cations

| cation | reaction with |  |
| :--- | :--- | :--- |
|  | $\mathrm{NaOH}(\mathrm{aq})$ | $\mathrm{NH}_{3}(\mathrm{aq})$ |
| aluminium, $\mathrm{Al}^{3+}(\mathrm{aq})$ | white ppt. soluble in excess | white ppt. insoluble in excess |
| ammonium, $\mathrm{NH}_{4}^{+}(\mathrm{aq})$ | no ppt. <br> ammonia produced on warming | - |
| barium, $\mathrm{Ba}^{2+}(\mathrm{aq})$ | faint white ppt. is observed unless <br> $\left[\mathrm{Ba}{ }^{2+}(\mathrm{aq})\right]$ is very low | no ppt. |
| calcium, $\mathrm{Ca}^{2+}(\mathrm{aq})$ | white ppt. unless $\left[\mathrm{Ca}{ }^{2+}(\mathrm{aq})\right]$ is very <br> low | no ppt. |
| chromium(III), $\mathrm{Cr}^{3+}(\mathrm{aq})$ | grey-green ppt. soluble in excess <br> giving dark green solution | grey-green ppt. insoluble in excess |
| copper(II), $\mathrm{Cu}^{2+}(\mathrm{aq})$ | pale blue ppt. insoluble in excess | pale blue ppt. soluble in excess <br> giving dark blue solution |
| iron(II), $\mathrm{Fe}^{2+}(\mathrm{aq})$ | green ppt. turning brown on <br> contact with air <br> insoluble in excess | green ppt. turning brown on <br> contact with air <br> insoluble in excess |
| iron(III), $\mathrm{Fe}^{3+}(\mathrm{aq})$ | red-brown ppt. insoluble in excess | red-brown ppt. insoluble in excess |
| magnesium, $\mathrm{Mg}^{2+}(\mathrm{aq})$ | white ppt. insoluble in excess | white ppt. insoluble in excess |
| manganese(II), $\mathrm{Mn}^{2+}(\mathrm{aq})$ | off-white ppt. rapidly turning brown <br> on contact with air <br> insoluble in excess | off-white ppt. rapidly turning brown <br> on contact with air <br> insoluble in excess |
| zinc, $\mathrm{Zn}^{2+}(\mathrm{aq})$ | white ppt. soluble in excess | white ppt. soluble in excess |

## 2 Reactions of anions

| anion | reaction |
| :---: | :---: |
| carbonate, $\mathrm{CO}_{3}{ }^{2-}$ | $\mathrm{CO}_{2}$ liberated by dilute acids |
| chloride, $\mathrm{Cl}^{-}(\mathrm{aq})$ | gives white ppt. with $\mathrm{Ag}^{+}(\mathrm{aq})$ (soluble in $\mathrm{NH}_{3}(\mathrm{aq})$ ) |
| bromide, $\mathrm{Br}^{-}(\mathrm{aq})$ | gives cream/off-white ppt. with $\mathrm{Ag}^{+}(\mathrm{aq})$ (partially soluble in $\mathrm{NH}_{3}(\mathrm{aq})$ ) |
| iodide, $\mathrm{I}^{-}(\mathrm{aq})$ | gives pale yellow ppt. with $\mathrm{Ag}^{+}(\mathrm{aq})$ (insoluble in $\mathrm{NH}_{3}(\mathrm{aq})$ ) |
| nitrate, $\mathrm{NO}_{3}^{-}(\mathrm{aq})$ | $\mathrm{NH}_{3}$ liberated on heating with $\mathrm{OH}^{-}(\mathrm{aq})$ and Al foil |
| nitrite, $\mathrm{NO}_{2}{ }^{-}(\mathrm{aq})$ | $\mathrm{NH}_{3}$ liberated on heating with $\mathrm{OH}^{-}(\mathrm{aq})$ and Al foil; decolourises acidified aqueous $\mathrm{KMnO}_{4}$ |
| sulfate, $\mathrm{SO}_{4}{ }^{2-}(\mathrm{aq})$ | gives white ppt. with $\mathrm{Ba}^{2+}(\mathrm{aq})$ (insoluble in excess dilute strong acids); gives white ppt. with high $\left[\mathrm{Ca}^{2+}(\mathrm{aq})\right]$ |
| sulfite, $\mathrm{SO}_{3}{ }^{2-}(\mathrm{aq})$ | gives white ppt. with $\mathrm{Ba}^{2+}(\mathrm{aq})$ (soluble in excess dilute strong acids); decolourises acidified aqueous $\mathrm{KMnO}_{4}$ |
| thiosulfate, $\mathrm{S}_{2} \mathrm{O}_{3}{ }^{2-}(\mathrm{aq})$ | gives off-white/pale yellow ppt. slowly with $\mathrm{H}^{+}$ |

## 3 Tests for gases

| gas | test and test result |
| :--- | :--- |
| ammonia, $\mathrm{NH}_{3}$ | turns damp red litmus paper blue |
| carbon dioxide, $\mathrm{CO}_{2}$ | gives a white ppt. with limewater |
| hydrogen, $\mathrm{H}_{2}$ | 'pops' with a lighted splint |
| oxygen, $\mathrm{O}_{2}$ | relights a glowing splint |

## 4 Tests for elements

| element | test and test result |
| :--- | :--- |
| iodine, $\mathrm{I}_{2}$ | gives blue-black colour on addition of starch solution |

Important values, constants and standards

| molar gas constant | $R=8.31 \mathrm{JK}^{-1} \mathrm{~mol}^{-1}$ |
| :--- | :--- |
| Faraday constant | $F=9.65 \times 10^{4} \mathrm{C} \mathrm{mol}^{-1}$ |
| Avogadro constant | $L=6.022 \times 10^{23} \mathrm{~mol}^{-1}$ |
| electronic charge | $e=-1.60 \times 10^{-19} \mathrm{C}$ |
| molar volume of gas | $V_{\mathrm{m}}=22.4 \mathrm{dm}^{3} \mathrm{~mol}^{-1}$ at s.t.p. $(101 \mathrm{kPa}$ and 273 K$)$ <br> $V_{\mathrm{m}}=24.0 \mathrm{dm}^{3} \mathrm{~mol}^{-1}$ at room conditions |
| ionic product of water | $K_{\mathrm{w}}=1.00 \times 10^{-14} \mathrm{~mol}^{2} \mathrm{dm}^{-6}\left(\right.$ at $\left.298 \mathrm{~K}\left(25^{\circ} \mathrm{C}\right)\right)$ |
| specific heat capacity of water | $c=4.18 \mathrm{~kJ} \mathrm{~kg}^{-1} \mathrm{~K}^{-1}\left(4.18 \mathrm{Jg}^{-1} \mathrm{~K}^{-1}\right)$ |
