	Advanced Pract	ical Skills 2	Oct	tober/November 2013
				2 hours
	Candidates ans	wer on the Question Paper.		
	Additional Mater	rials: As listed in the Confidential Instructions		
	READ THESE I	NSTRUCTIONS FIRST		
	Write vour Cent	re number, candidate number and name on all the wo	ork you hand in.	

Give details of the practical session and laboratory where appropriate, in the boxes provided. Write in dark blue or black pen. You may use a soft pencil for any diagrams, graphs or rough working. Do not use staples, paper clips, highlighters, glue or correction fluid. DO **NOT** WRITE IN ANY BARCODES.

Answer **all** questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

Use of a Data Booklet is unnecessary.

Qualitative Analysis Notes are printed on pages 11 and 12.

At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [] at the end of each question or part question.

This document consists of **12** printed pages.

1 In this experiment you are to determine the concentration of aqueous potassium manganate(VII), **FB 3**, by titration.

In the titration potassium manganate(VII) is first reacted with acidified potassium iodide to produce iodine. The amount of iodine formed is then determined by titrating the mixture with

For

Examiner's

Use

\_\_\_\_\_

- **FB 1** is hydrated sodium thiosulfate,  $Na_2S_2O_3.5H_2O$ .
- **FB 2** is dilute sulfuric acid,  $H_2SO_4$ .
- FB 3 is aqueous potassium manganate(VII), KMnO<sub>4</sub>.
- FB 4 is aqueous potassium iodide, KI.

starch indicator

sodium thiosulfate.

## (a) Method

## Preparing a solution of FB 1

- Weigh the 250 cm<sup>3</sup> beaker and record the mass in the space below.
- Add all the **FB 1** to the beaker. Weigh the beaker with **FB 1** and record the mass.
- Calculate the mass of FB 1 used and record this in the space below.
- Add approximately 100 cm<sup>3</sup> of distilled water to the beaker. Stir until all the solid has dissolved.
- Transfer the solution into the 250 cm<sup>3</sup> volumetric (graduated) flask labelled **FB 5**.
- Wash out the beaker thoroughly using distilled water and add the washings to the volumetric flask. Make the solution up to the mark using distilled water.
- Shake the flask thoroughly to mix the solution before using it for your titrations.
- This solution of sodium thiosulfate is **FB 5**.

# Titration

- Use the measuring cylinder to add 20 cm<sup>3</sup> of **FB 2** to a conical flask.
- Use the measuring cylinder to add 10 cm<sup>3</sup> of **FB 4** to the same flask.
- Pipette 25.0 cm<sup>3</sup> of **FB 3** into the same flask.
- The colour of the mixture is caused by iodine.
- Fill the burette with **FB 5**.
- Begin each titration **without** adding the starch indicator.
- Add 10 drops of starch indicator when the colour of the mixture becomes (pale) yellow.
  - The end-point is when the blue-black colour caused by the starch disappears.
- Perform a **rough** titration and record your burette readings in the space below.

The rough titre is ..... cm<sup>3</sup>.

https://xtremepape.rs/

- Carry out as many accurate titrations as you think necessary to obtain consistent results.
- Make sure any recorded results show the precision of your practical work.
- Record in a suitable form below all of your burette readings and the volume of **FB 5** added in each accurate titration.

[7]

(b) From your accurate titration results, obtain a suitable value to be used in your calculations. Show clearly how you have obtained this value.

suitable value =  $\dots$  cm<sup>3</sup> of **FB 5** [1]

## (c) Calculations

Show your working and appropriate significant figures in the final answer to **each** step of your calculations.

(i) Calculate the number of moles of sodium thiosulfate, **FB 1**, that were weighed out. The relative formula mass of hydrated sodium thiosulfate is 248.2.

moles of sodium thiosulfate = ..... mol

(ii) Calculate the number of moles of sodium thiosulfate that were present in the volume of **FB 5** calculated in (b).

moles of sodium thiosulfate = ..... mol

For (iii) Iodine produced by the reaction in the conical flask reacts with sodium thiosulfate. Examiner's Use the equation below to calculate the number of moles of iodine that reacted with Use sodium thiosulfate in (ii).  $I_2$  + 2Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub>  $\rightarrow$  2NaI + Na<sub>2</sub>S<sub>4</sub>O<sub>6</sub> moles of  $I_2$  = ..... mol (iv) The iodine is produced as a result of the oxidation of iodide ions in potassium iodide, FB 4, by potassium manganate(VII), FB 3. The ionic equation for this reaction is  $2MnO_4^-$  +  $16H^+$  +  $10I^- \rightarrow 2Mn^{2+}$  +  $5I_2$  +  $8H_2O$ Calculate the number of moles of potassium manganate(VII), KMnO<sub>4</sub>, that reacted to produce the iodine in (iii). moles of KMnO<sub>4</sub> = ..... mol (v) Calculate the concentration of potassium manganate(VII), in g dm<sup>-3</sup>, in **FB 3**. Ι (A,: O, 16.0; K, 39.1; Mn, 54.9) Π III IV V concentration of  $KMnO_4$  = ..... g dm<sup>-3</sup> [5] (d) (i) State the maximum error in any single reading of the burette. maximum error = ..... cm<sup>3</sup> (ii) Calculate the maximum percentage error in volume of FB 5 in your first accurate titre. maximum percentage error = ...... % [1] [Total: 14]

2 In this experiment you will heat two separate samples of a hydrated salt to drive off the water of crystallisation.

You will then calculate the relative atomic mass of the metal in the salt.

**FB 6** is the hydrated salt.

The formula of **FB 6** is  $MSO_4.7H_2O$ , where **M** is the metal.

# (a) Method

Record **all** weighings, in an appropriate form, in the space below.

- Record the mass of the empty crucible without its lid. •
- Add between 2.0 and 2.4 g of FB 6 into the crucible. Record the mass of the crucible and its contents.
- Use a pipe-clay triangle to support the crucible and contents on a tripod.
- Heat the crucible and its contents gently and carefully for about two minutes, with the lid off. Then heat very strongly for a further **three** minutes.
- Put the lid on the crucible and leave it to cool for approximately 10 minutes.

# While you are waiting for the crucible to cool, start work on Question 3.

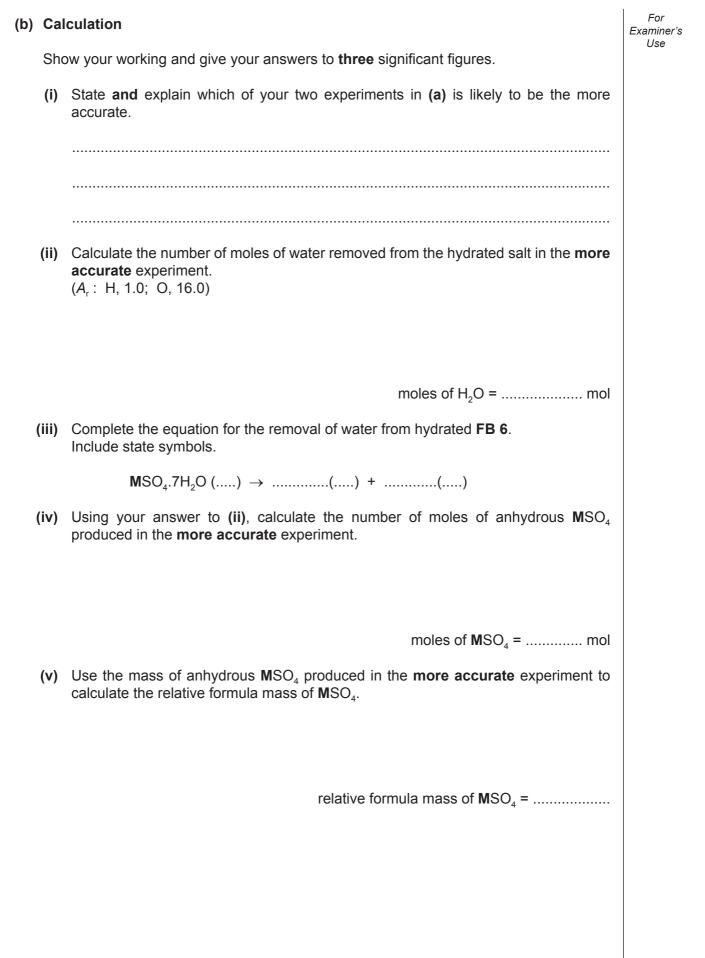

- When the crucible is cool, **remove the lid**, and weigh the crucible with the residue.
- Record the mass of anhydrous MSO<sub>4</sub> remaining in the crucible after heating and therefore calculate the mass of water lost.
- To prepare for the second experiment, use a spatula to remove the solid residue from the crucible into the beaker labelled waste.
- Reweigh the empty crucible without its lid.
- Carry out the experiment again. This time use between 2.5 and 2.9 g of FB 6.

Examiner's Use

#### 3 Qualitative Analysis

At each stage of any test you are to record details of the following.

- colour changes seen
- the formation of any precipitate
- the solubility of such precipitates in an excess of the reagent added

Where gases are released they should be identified by a test, **described in the appropriate place in your observations**.

You should indicate clearly at what stage in a test a change occurs. No additional tests for ions present should be attempted.

#### If any solution is warmed, a boiling tube MUST be used.

Rinse and reuse test-tubes and boiling tubes where possible.

Where reagents are selected for use in a test, the name or correct formula of the element or compound must be given.

- (a) You will carry out further tests on the ions in **FB 6**.
  - Put a spatula measure of **FB 6** into a test-tube.
  - Half fill the test-tube with distilled water and stir until the solid dissolves.
  - Use a 1 cm depth of the solution of FB 6 in separate test-tubes for the tests you will carry out.
  - (i) Add aqueous sodium hydroxide to **FB 6** solution. Add aqueous ammonia to **FB 6** solution.

Record your observations below.

(ii) Carry out a test of your choice to show that sulfate ions are present in **FB 6**.

reagent(s) used ..... observation(s) .....

.....

(iii) Give the ionic equation for the reaction in test (ii).

For Examiner's Use

[4]

For Examiner's Use

- (b) FB 7, FB 8 and FB 9 are aqueous solutions, each containing one cation and one anion. None of the cations and none of the anions in FB 7, FB 8 and FB 9 are identical.
  - (i) Add a 2 cm magnesium strip to a 2 cm depth of each solution in a clean test-tube. Mix pairs of solutions as shown so that you can complete the table shown below. Use 1 cm depths of solutions in clean test-tubes. Record your observations in the table.

(ii) The anion present in FB 7 is the sulfate ion. Identify FB 7, giving evidence from your observations.

FB 7 is .....

For (iii) Add a 1 cm depth of aqueous hydrogen peroxide, FB 10, to the mixture of FB 7 and Examiner's FB 9 that you kept from (i). Then add three drops of starch. Use Record your observation(s). Identify the coloured chemical produced when hydrogen peroxide was added to the mixture of FB 7 and FB 9 and name the anion present in FB 9. observations ..... ..... chemical produced ..... anion in FB 9 ..... (iv) Give the chemical formula of the substance you observed when solutions FB 8 and FB 9 were mixed. [7]

lead(II), Pb²+(aq)	white ppt. soluble in excess	white ppt. insoluble in excess	
magnesium, Mg²⁺(aq)	white ppt. insoluble in excess	white ppt. insoluble in excess	
manganese(II), Mn²⁺(aq)	off-white ppt. rapidly turning brown on contact with air insoluble in excess	off-white ppt. rapidly turning brown on contact with air insoluble in excess	
zinc, Zn²+(aq)	white ppt. soluble in excess	white ppt. soluble in excess	

[Lead(II) ions can be distinguished from aluminium ions by the insolubility of lead(II) chloride.]

## 2 Reactions of anions

ion	reaction
carbonate, CO <sub>3</sub> <sup>2–</sup>	CO <sub>2</sub> liberated by dilute acids
chromate(VI), CrO <sub>4</sub> ²-(aq)	yellow solution turns orange with H <sup>+</sup> (aq); gives yellow ppt. with Ba <sup>2+</sup> (aq); gives bright yellow ppt. with Pb <sup>2+</sup> (aq)
chloride, C <i>l</i> ⁻(aq)	gives white ppt. with Ag <sup>+</sup> (aq) (soluble in $NH_3(aq)$ ); gives white ppt. with Pb <sup>2+</sup> (aq)
bromide, Br⁻(aq)	gives cream ppt. with Ag <sup>+</sup> (aq) (partially soluble in $NH_3(aq)$ ); gives white ppt. with Pb <sup>2+</sup> (aq)
iodide, I⁻(aq)	gives yellow ppt. with Ag <sup>+</sup> (aq) (insoluble in NH <sub>3</sub> (aq)); gives yellow ppt. with Pb <sup>2+</sup> (aq)
nitrate, NO <sub>3</sub> ⁻(aq)	$NH_3$ liberated on heating with OH <sup>-</sup> (aq) and A <i>l</i> foil
nitrite, NO₂⁻(aq)	NH <sub>3</sub> liberated on heating with OH <sup>-</sup> (aq) and A <i>l</i> foil; NO liberated by dilute acids (colourless NO $\rightarrow$ (pale) brown NO <sub>2</sub> in air)
sulfate, SO <sub>4</sub> <sup>2-</sup> (aq)	gives white ppt. with Ba <sup>2+</sup> (aq) or with Pb <sup>2+</sup> (aq) (insoluble in excess dilute strong acids)
sulfite, SO <sub>3</sub> ²-(aq)	$SO_2$ liberated with dilute acids; gives white ppt. with Ba <sup>2+</sup> (aq) (soluble in excess dilute strong acids)

12

## 3 Tests for gases

gas	test and test result	
ammonia, NH <sub>3</sub>	turns damp red litmus paper blue	
carbon dioxide, CO <sub>2</sub>	gives a white ppt. with limewater (ppt. dissolves with excess CO <sub>2</sub> )	
chlorine, $Cl_2$	bleaches damp litmus paper	
hydrogen, H <sub>2</sub>	"pops" with a lighted splint	
oxygen, O <sub>2</sub>	relights a glowing splint	
sulfur dioxide, SO <sub>2</sub>	turns acidified aqueous potassium dichromate(VI) from orange to green
