COMPUTER SCIENCE 9618/21
Paper 2 Problem Solving & Programming Skills May/June 2021

MARK SCHEME
Maximum Mark: 75

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2021 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

This document consists of 16 printed pages.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit
 is given for valid answers which go beyond the scope of the syllabus and mark scheme,
 referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these
 features are specifically assessed by the question as indicated by the mark scheme. The
 meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question		Answer				Marks
1(a)	Example value	Explanation	\	/ariable name	Data type	4
	"Wong"	The preferred name of the member joining the football club	Me	mberName	STRING	
	FALSE	A value to indicate whether an existing member of the club lives at the same address	Fa	milyMember	BOOLEAN	
	19/02/1983	When the member joined the football club	St	artDate	DATE	
	1345	The number of points a member has earned. Members of the club earn points for different activities.	Ро	ints	INTEGER	
	One mark for eac	ch appropriate variable name	plus	data type		
1(b)	Statement			Erro	or	5
	Result ← 2 & 4			Should be arith operator (not &) should be CHA) // 2 and 4	
	SubString ←	MID("pseudocode", 4,	1)	NO ERROR		
	IF $x = 3$ OR	4 THEN		Not Boolean va incorrect operat Condition incorr	tor //	
	Result ← St	atus AND INT(X/2)		INT (X/2) does to a boolean va incorrect operat	lue /	
	Message ← "	Done" + LENGTH(MyStrin	ng)	Can't add string		
	One mark for eac	ch row

Question	Answer	Marks
1(c)	Structure: • Record	3
	Justification:	
	Alternative	

© UCLES 2021 Page 4 of 16

Question	Answer	Marks
2(a)	LoanID LoanExtend() LoanExtend() LoanReturn() CheckReserve() One mark for: 1 All four boxes correctly labelled and positioned 2 Selection diamond (only on UpdateLoan and no iteration arrows) 3 Parameters to and from LoanExtend() 4 Parameters to and from CheckReserve() 5 Parameters to and from LoanReturn()	5
2(b)	PROCEDURE LoanReturn (LoanID, BookID : STRING, BYREF Fine : REAL) One mark for each underlined part	2

Question	Answer	Marks
2(c)	Explanation of mark points: 1 Initialise MAX to first value input 2 Set Total to zero 3 Input 49 more values (or 50 values in total) 4 Sum all values input 5 Set new MAX when Input value > MAX in a loop 6 Sum all but largest (or subtract MAX from total), calculate and output average	

Question	Answer	Marks
3(a)(i)	One mark per bullet point:	2
	 Data from the arrays is written to the <u>files</u> at the end of the day / before the program is terminated / computer is switched off Data can then be read from the <u>files</u> at the start of the next day and written to / stored in the <u>arrays</u> No need to (re-)enter the data manually // only need to enter data once 	
	Note: Max 2 marks	
3(a)(ii)	The data is retained when the program is terminated / after the computer is switched off // data is stored permanently // non-volatile storage	1
3(a)(iii)	One mark per bullet point:	2
	 Data items are combined to form a single string / saved as a single line in the file Data items are separated by a special character // make each data item a fixed length 	
	ALTERNATIVE:	
	 Convert all data items / 'number of people' to strings Consecutive / each line stores a separate data item

May/June 2021

Question	Answer	Marks
4(b)	Loop structure: A count-controlled loop	2
	Justification: The number of iterations is known	
	One mark per point	
4(c)(i)	A couple of solutions:	1
	24 ThisChar ← LCASE(MID(Name, Index, 1)	
	ALTERNATIVE:	
	NewName ← NewName & LCASE(ThisChar)	
	Ignore line number	
4(c)(ii)	One mark for each:	2
	Line number: 26	
	New position: Move to after line 27 / line 28	

Question	Answer	Marks
5	PROCEDURE Sort() DECLARE Temp : INTEGER DECLARE NoSwaps : BOOLEAN DECLARE Boundary, Row, Col : INTEGER Boundary ← 999 REPEAT NoSwaps ← TRUE FOR Row ← 1 TO Boundary IF Result[Row, 2] > Result[Row + 1, 2] THEN FOR Col ← 1 TO 2 Temp ← Result [Row, Col] Result [Row, Col] ← Result [Row + 1, Col] Result [Row + 1, Col] ← Temp NEXT Col NoSwaps ← FALSE ENDIF NEXT J Boundary ← Boundary - 1 UNTIL NoSwaps = TRUE	8
	ENDPROCEDURE Mark as follows:	
	 Outer loop Inner loop Correct comparison in a loop Correct swap of col1 array elements in a loop Correct swap of col2 array elements in a loop (via loop or separate statements) 'NoSwap' mechanism: Conditional outer loop including flag reset 'NoSwap' mechanism: Set flag in inner loop to indicate swap Reducing Boundary in the <u>outer</u> loop 	

Question	Answer	Marks
6(a)	One mark per point:	4
	 Check for a free node Search for correct insertion point Assign data value B to first node in free list / node pointed to by start pointer of free list Pointer from A will be changed to point to node containing B (instead of C) Pointer from B will be changed to point to node containing C Start pointer in free list moved to point to next free node 	
	Note: max 4 marks	

Question	Answer	Marks
6(b)	One mark per point:	2
	 An array (1D) to store the data and a second array (1D) to store the pointers An (integer) variable to hold the start pointer and an (integer) variable to store the next free pointer 	
	ALTERNATIVE:	
	 Define a record type comprising a data element and a pointer and declare an array (1D) of this type An integer variable to hold the start pointer and an integer variable to store the next free pointer 	

© UCLES 2021 Page 12 of 16

Question	Answer	Marks
7(a)	FUNCTION GetStart (WordNum : INTEGER) RETURNS INTEGER DECLARE Index, ThisPos, NumFound : INTEGER DECLARE ThisChar : Char	7
	CONSTANT SPACECHAR = ' '	
	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$	
	<pre>IF WordNum = 1 THEN // if looking for word 1 Index ← 1</pre>	
	// required word ENDIF ENDIF ThisPos ← ThisPos + 1 ENDWHILE ENDIF RETURN Index	
	ENDFUNCTION	
	1 mark for each of the following:	
	Function heading, including return type and function end Loop counting spaces until word found or end of FNString extract a character from FNString in a loop compare with SPACECHAR and increment count if equal in a loop compare count with WordNum - 1 (depending on initialisation value) in a loop if equal then set flag or Index to ThisPos + 1 in a loop Return Index (correctly in all cases / following a reasonable attempt) Works for special case when looking for word 1	
	Note: Max 7 marks	

Question	Answer	Marks
7(b)	Marks awarded for any reference to each of the following steps of the algorithm:	4
	 Mention of variable for use as array index Use of a loop (to check through the array) If word is the same as the current array element then return FALSE / set flag If word not already in array, loop to find unused element (second loop) Store word in unused element and return TRUE, otherwise return FALSE 	
	VARIATION:	
	 Mention of variable for use as array index Use of a loop (to check through the array) Save index of (first) unused element found If word is the same as the current array element then return FALSE / set flag If word not already in array and unused element available, store word in unused element and return TRUE otherwise return FALSE 	
	Note: Max 4 marks

Question	Answer	Marks
7(c)	FUNCTION GetWord (Index : INTEGER) RETURNS STRING DECLARE NextWord : STRING DECLARE Done : BOOLEAN DECLARE ThisChar : CHAR DECLARE Index : INTEGER CONSTANT SPACECHAR = ' '	5
	<pre>NextWord ← "" Done ← FALSE REPEAT ThisChar ← MID(FNString, Index, 1) IF ThisChar <> SPACECHAR THEN NextWord ← NextWord & ThisChar // build up NextWord ENDIF IF ThisChar = SPACECHAR OR Index = LENGTH(FNString) THEN Done ← TRUE ENDIF</pre>	
	<pre>Index ← Index + 1 UNTIL Done = TRUE RETURN NextWord ENDFUNCTION</pre>	
	1 Conditional loop 2 Extract char from FNString and compare with SPACECHAR in a loop 3 Concatenate with NextWord if not SPACECHAR in a loop 4 Exit loop when SPACECHAR encountered or when end of FNString reached 5 Return NextWord (after reasonable attempt at forming, and must have been initialised)	

Question	Answer	Marks
7(c)	The 'length and substring' solution:	
	FUNCTION GetWord (Index : INTEGER) RETURNS STRING DECLARE Done : BOOLEAN DECLARE ThisChar : CHAR DECLARE Index, NextPos : INTEGER	
	CONSTANT SPACECHAR = ' '	
	Done ← FALSE NextPos ← Index // must be at least one character in // the required word	
	REPEAT ThisChar ← MID(FNString, NextPos, 1) IF ThisChar = SPACECHAR OR NextPos = LENGTH(FNString) THEN Done ← TRUE	
	ELSE NextPos NextPos + 1 ENDIF UNTIL Done = TRUE	
	IF NextPos = LENGTH(FNString) THEN NextPos ← NextPos - 1 // special case when last word ENDIF	
	RETURN MID(FNString, Index, NextPos - Index)	
	ENDFUNCTION	
	1 mark for each of the following:	
	1 Conditional loop 2extract char from FNString and compare with SPACECHAR in a loop	
	3 increment count if word continues 4 Exit loop when SPACECHAR encountered or when end of FNString reached	
	5 Apply substring function and Return
