9691/22

Paper 2

October/November 2012

2 hours

Candidates answer on the Question Paper.

No additional materials are required.

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

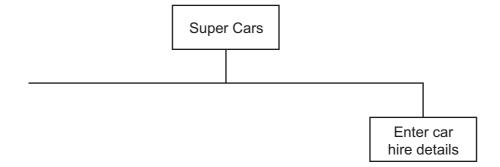

This document consists of  ${\bf 13}$  printed pages and  ${\bf 3}$  blank pages.

Soni works for a software house which has been asked to design software for a car hire company, Super Cars.

For Examiner's Use

- 1 Soni decides on the main tasks:
  - enter car details
  - enter car hire details for
    - o hirer
    - o car
    - payment
  - (a) Complete the structure diagram showing these tasks.

(b)	State <b>two</b> reasons for dividing the main task into smaller tasks.

- (c) Entering car details has two subtasks:
  - input the car's identification details
  - input the hire rates for that car

Add these to the structure diagram in part (a).

[1]

[2]

(d) The colour of each car is also recorded. The following pseudocode should validate the car colour.

For Examiner's Use

```
INPUT Colour
IF (Colour = "blue") OR (Colour = "black") OR (Colour = "grey")
    THEN
        OUTPUT Colour " is valid"
    ELSE
        OUTPUT "Invalid"
ENDIF

State the output when the colour input is:

(i) green
```

(iii) Black
(iii) grey

(iii) grey \_\_\_\_\_\_[3]

(e) (i) All car registrations are 6 characters long and have the format XXHIRE, where X is For example, 53HIRE is a valid registration. In a high-level programming language write code that will validate the format of a car registration input into the variable CarReg. (Add extra line numbers if required.) Programming language used Code 1 ..... 6 ...... 7 \_\_\_\_\_\_ [10]

For Examiner's Use

	(ii)	Explain why 487HIRE is an invalid car registration.
		State the line number of your code in part (e)(i) which detects that it is invalid.
		Line Number [2]
(f)	Eve	entually the software will be subject to alpha testing and beta testing.
	Sor	i is planning each of these testing stages for this software.
		plain who will do the testing, when the testing would be carried out and what will be purpose of each testing stage.
	(i)	Alpha testing
		who
		when
		purpose
		[3]
	(ii)	Beta testing
		who
		when
		purpose
		[3]

**2** Super Cars owns a rectangular car park with 25 rows; each row has 4 parking spaces. Each car is always parked in the same space.

The array ParkingSpace[25, 4] stores the car registrations.

Soni uses a flowchart to help him design a module to populate the array with the car registrations.

Input is terminated using the rogue value "OOHIRE".

© UCLES 2012 9691/22/O/N/12

For Examiner's Use (a) Complete the trace table for the flowchart with the first five car registrations. The values to be entered are 52HIRE, 10HIRE, 67HIRE, 24HIRE, and 63HIRE. The row with the headings will also have to be completed.

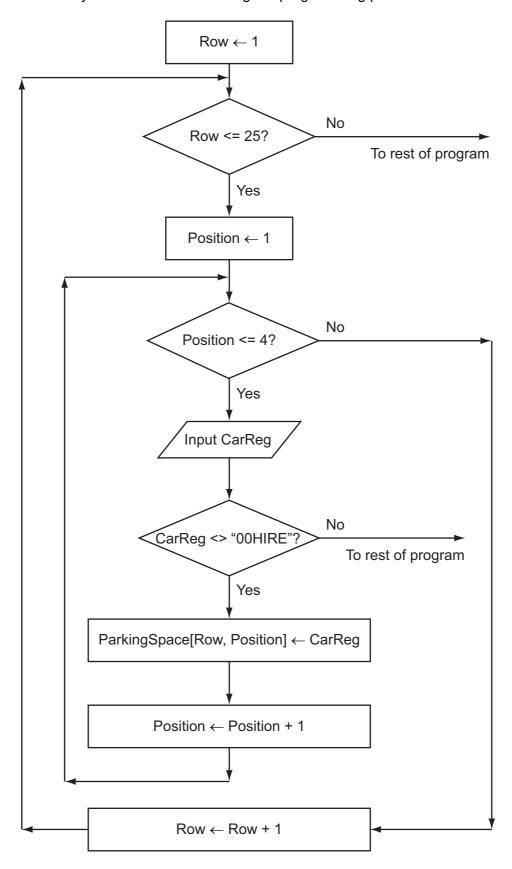

For Examiner's Use

Pow	Position	Pow/-25			Par	kingSp	ace	
ROW	POSICION	ROW\-25		[1,1]				
1	1	TRUE		52HIRE				

[6]

**(b)** From the flowchart write the module code, using nested WHILE loops. Ensure that your code demonstrates good programming practice.

For Examiner's Use

	For miner's
Code	Use
[7]	

(c)	(i)	One of the modules uses the expression:
		Area /(CarWidth * CarLength - EmptySpaces)
		State the value of the part of the expression inside the brackets when
		CarWidth ← 3 CarLength ← 4 EmptySpaces ← 12
		[1]
	(ii)	If this expression is used with the above values, there will be an error.
		State the name of this type of error.
		[1]
(	(iii)	Explain how the programmer can stop this type of error occurring during execution.
		[2]
(d)	The	ere are a number of debugging tools associated with high-level languages.
	Des	scribe how breakpoints and stepping can be used when developing a program.
		[4]

3	Super	Cars	will	store	the	data	in	files.	
---	-------	------	------	-------	-----	------	----	--------	--

- (a) One file will store the following data:
  - car registration
  - make of car
  - date car bought
  - whether on hire or not

Complete the following table. Use a single value for Field Size.

Field Name	Data Type	Field Size (in bytes)
CarReg		
Make		
DateBought		
OnHire		

[4]

(b)	Estimate the size, in kilobytes, of the file if it stores the details of 100 cars. Show your working.
	[4]

(c)	(i)	Using a high-level programming language, define a car record with identifier HireCar and the fields listed in part (a).
		Programming language
		Code
		[5]
	(ii)	Car records are stored in a file SuperCars.
		Write a procedure, $AddCar()$ , to add a record to the end of the file. The record is passed as the parameter. You should assume that the file is not already in use.
		[5]

	Describe each method.
	By value
	By reference
