Paper 31 Advanced Practical Skills 1

October/November 2009

2 hours

Candidates answer on the Question Paper.

As listed in the Confidential Instructions. Additional Materials:

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

#### Answer both questions.

You will be allowed to work with the apparatus for a maximum of one hour for each question.

You are expected to record all your observations as soon as these observations are made, and to plan the presentation of the records so that it is not necessary to make a fair copy of them. The working of the answers is to be handed in.

Additional answer paper and graph paper should be submitted only if it becomes necessary to do so.

You are reminded of the need for good English and clear presentation in your answers.

At the end of the examination, fasten all your work securely together.

All questions in this paper carry equal marks.

For Examiner's Use

1 In this experiment you will investigate the position of a wooden rod suspended in water as the depth of the water is varied.

Assemble the apparatus, as shown in Fig.1.1, then add water to the beaker until the mass attached to the bottom of the rod is completely covered and is not touching the bottom of the beaker.

(a) Record h and z, as shown in Fig.1.1.

Please turn over for Question 2.

#### You may not need to use all of the materials provided.

For Examiner's Use

- 2 In this experiment you are provided with a ball suspended by a thread. You will investigate how the recoil distance is related to the length of the thread when the ball is struck by a moving marble.
  - (a) Assemble the apparatus, as shown in Fig. 2.1, with the thread clamped between the two wooden blocks so that l is about 50 cm.

**(b)** Further assemble the apparatus, as shown in Fig. 2.2. When the marble is released from rest, it rolls down the tube and hits the centre of the ball.

Adjust the tilt of the tube so that the recoil distance *d* of the ball is about 20 cm.
