CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Advanced Subsidiary Level and GCE Advanced Level

MARK SCHEME for the October/November 2013 series

9702 PHYSICS

9702/33 Paper 3 (Advanced Practical Skills 1), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2013 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

	<u> </u>		GCE AS/A LEVEL – October/November 2013	9702	33
(a)	(i)	Valu	e for d in the range 0.15 mm $\leq d \leq$ 0.25 mm, with unit.		[1]
(c)	(ii)	Valu	tes of V_1 and V_2 , and $V_1 > V_2$.		[1]
(d)			of readings of l , V_1 and V_2 scores 5 marks, five sets scorlp from Supervisor –2. Minor help from Supervisor –1.	res 4 marks et	c. [5]
	Ran	ige: /	∆ <i>l</i> ≥ 30 cm.		[1]
	Eac	h col	headings: umn heading must contain a quantity and a unit where a must conform to accepted scientific convention, e.g. $\it l / \it i$		[1]
		siste /alue	ncy: s of raw $\it l$ must be given to the nearest mm.		[1]
	Sigr	nifica	nt figures: nt figures for every row of V_1/V_2 must be the same as of significant figures used in V_1 and V_2 .	, or one more	[1] than the least
		culati ues o	on: f V_1/V_2 calculated correctly.		[1]
(e)	(i)	Axes			[1]
		Scal both Scal	sible scales must be used, no awkward scales (e.g. 3:10 es must be chosen so that the plotted points occupy a x and y directions. es must be labelled with the quantity that is being plotte a markings about he no more than three large equares.	t least half the	e graph grid in
		Plott All o Dian	e markings should be no more than three large squares ting of points: bservations in the table must be plotted. neter of plotted point must be ≤ half a small square (no " k to an accuracy of half a small square.	·	[1]
			lity: oints in the table must be plotted on the grid for this man oints must be within 0.05 (to scale) on the y-axis V_1/V_2 f		
	(ii)	Judg Thei Allov	of best fit: ge by balance of all points on the grid about the candidate must be an even distribution of points either side of the vone anomalous point only if clearly indicated by the carry part hat be kinked or thinker than half a small aguera-	e line along th	• ,

Mark Scheme

Syllabus

Paper

Line must not be kinked or thicker than half a small square.

		GCE AS/A LEVEL – October/November 2	2013 9702	33		
	(iii)	 (iii) Gradient: The hypotenuse of the triangle must be at least half the length of the drawn line. Both read-offs must be accurate to half a small square in both the x and y directions. The method of calculation must be correct. 				
		y-intercept: Either: Check correct read off from a point on the line and substituted into $y = mx + c$. Read-off must be accurate to half a small square in both x and y directions.				
		Or: Check read-off of the intercept directly from the gra	ph.			
	(f) (i)	Value of $P = \text{candidate's gradient}$. Value of $Q = \text{candidate's gradient}$	didate's intercept.	[1]		
	(ii)	Value of ρ in range 1.0 – 20.0 × 10 ⁻⁷ Ω m		[1]		
				[Total: 20]		
2	(b) Val	ue of \emph{m} to the nearest 1 g or better with consistent $\emph{u}\emph{i}$	nit.	[1]		
	(c) (ii)	Measurement of raw θ to nearest degree with unit. Evidence of repeat readings for θ .		[1] [1]		
	(iii)	Percentage uncertainty in θ based on absolute un provided this is not zero), and correct method of cal		half the range [1]		
	(iv)	Correct calculation of tan (θ /2).		[1]		
	(d) (i)	Second value of $m > $ first value of m .		[1]		
	(ii)	Second value of θ . Quality: second value of θ < first value of θ .		[1] [1]		
	(e) Val	ue of θ .		[1]		
	(f) (i)	Two values of <i>k</i> calculated correctly.		[1]		
	(ii)	Justification of s.f. in k linked to significant figures in	m and θ .	[1]		
	(iii)	Sensible comment relating to the calculated value specified by the candidate.	ues of <i>k</i> , testing agai	nst a criterion [1]

	GCE AS/A LEVEL – October/November 2013	9702	33

(g)	(i) Limitations (4 max)	(ii) Improvements (4 max)	Do not credit
(9)	(1) Limitations (4 max)	(ii) improvements (4 max)	Do not credit
A	Two readings not enough (to draw a conclusion	Take more readings <u>and</u> plot a graph / take more readings and calculate more <i>k</i> values and compare	repeat readings / 'few readings' / 'take more readings and calculate average' / 'only one reading' / 'repeat readings' on its own
В	Difficult to measure θ because hook of mass (hanger) in the way / thick band	Tie thread to centre of bottom of rubber band and hang mass from it	
С	Difficult to hold the protractor steady / parallax error reading angle / protractor	Improved method to measure θ e.g. project image of stretched rubber band onto a screen / mark on board / measure lengths and calculate θ clamp protractor / take picture or video and measure angle	
D	Rubber band stretches over time	Take readings quickly / remove mass from rubber band between readings	
E	Stands moved / rods twist when loads attached to rubber band	Method of preventing movement of stands / clamp stands to bench / use nails in board	
F	Difficult to locate centre of band	Method of locating <u>and mark</u> centre e.g. measure and mark centre	
G	Change in θ small	Larger range of masses	

[Total: 20]
