Paper 3 Resistant Materials MARK SCHEME Maximum Mark: 50

Published

Students did not sit exam papers in the June 2020 series due to the Covid-19 global pandemic.

This mark scheme is published to support teachers and students and should be read together with the question paper. It shows the requirements of the exam. The answer column of the mark scheme shows the proposed basis on which Examiners would award marks for this exam. Where appropriate, this column also provides the most likely acceptable alternative responses expected from students. Examiners usually review the mark scheme after they have seen student responses and update the mark scheme if appropriate. In the June series, Examiners were unable to consider the acceptability of alternative responses, as there were no student responses to consider.

Mark schemes should usually be read together with the Principal Examiner Report for Teachers. However, because students did not sit exam papers, there is no Principal Examiner Report for Teachers for the June 2020 series.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the June 2020 series for most Cambridge IGCSE[™] and Cambridge International A & AS Level components, and some Cambridge O Level components.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit
 is given for valid answers which go beyond the scope of the syllabus and mark scheme,
 referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks
1	Accept any 2 from length, type of head, material, gauge, 2×1 number reqd.	2

Question	Answer	Marks
2(a)	Alloy: brass or stainless steel 1	1
2(b)	Composite: carbon fibre 1	1

Question	Answer	Marks
3	Joint recognised1Accuracy of two halvings2 × 1	3

Question	Answer		Marks
4	Plastic chair:polypropylene, ABSMetal pipe fittings:copper, brass, stainless steel, aluminiumModel glider kit:balsa	1 1 1	3

Question	Answer		Marks
5	Template: used to mark out the shape quickly/accurately Former: used to enable the acrylic to be bent to shape Drilling jig: used to drill fixing holes quickly and accurately	1 1 1	3

Question	Answer	Marks
6	Chuck1Knurling tool1	2

Question	Answer	Marks
7(a)	Scriber, steel rule, try square 1	1
7(b)	Hacksaw 1	1
7(c)	File [specific name not required] 1	1

Question	Answer	Marks
8	Explanation Advantages include: consistent quality of products, less skilled labour reqd. faster production, easy to change to different products, continuous operation	2

Question	Answer	Marks
9	Appropriate method1Accuracy of drawing: proportion/orientation0-2	3

Question	Answer	Marks
10	Points include: Lid to retain heat, prevent spillages. Ridged 'collar' for grip, prevent burns. Tapered shape for stability and safety.	2

Question	Answer	Marks
11(a)	Drill small hole1Cut out waste with piercing saw1File to shape1Correctly named tools and equipment1	4
11(b)(i)	On end of leg:Die1Inside hole:Tap1	2
11(b)(ii)	Soldering	1
11(c)(i)	Use of a chisel [and mallet] to remove waste1Work piece held securely [clamped]1Technical accuracy1	3
11(c)(ii)	Benefit: close grain is unlikely to split easily. Provides a tough material.	1
11(d)	Modification: some sort of 'handle' recognised1Practical method1Appropriate materials1Suitable constructions1	4
11(e)(i)	Acrylic suitable: colourful, self-finishing, easy to work to reqd. design 2×1	2
11(e)(ii)	Extrusion/extrusion blow moulding	1
11(f)(i)	Tenon saw, hacksaw, Hegner saw, band saw	1
11(f)(ii)	Hold tube securely1Does not require measuring of tube to length15 different lengths can be sawn1Ease of 'changing' different lengths1	4
11(g)	Two ways include: wear a face mask, well-ventilated room, extraction unit 2×1	2

Question	Answer	Marks
12(a)	Short side width:80 mm1Base length:330–360 mm1Long partition length:330 mm *1Short partition:150 mm *1	4
12(b)	Dovetail, finger [comb], dowel, lapped, half-lapped, mitrenamed1Suitable joint recognised1Correct orientation [as per Fig. 12.1]1Good proportion/accuracy1	4
12(c)(i)	Tenon, dovetail, coping, Hegner, scroll, band saws 2×1	2
12(c)(ii)	Stable, will not warp or twist, less likely to split, strong in all directions 2×1	2
12(d)	Different method: use of vacuum formed plastic tray inserted1Sketch showing separate partitions1Added notes to explain process1	3
12(e)(i)	Lid can fit inside, on top of or over the sides of the box	5
12(e)(ii)	Modification: some sort of 'handle': practical method1Appropriate materials1Suitable constructions1	3
12(f)	Moulded shape : less constructions, rounded shape, inherent colours-no need for an applied finish 2×1	2

Question	Answer	Marks
13(a)	Two advantages: non-ferrous metals can be self-finished, attractive, resist corrosion 2×1	2
13(b)(i)	Hold tube securely1Does not require measuring of tube to length15 different lengths can be sawn1Ease of 'changing' different lengths1	4
13(b)(ii)	Tube held securely in [3 jaw] chuck1Lathe tool set up correctly1Lathe tool taken across the end of the tube and faced off1	3
13(c)(i)	Wet and dry [silicon carbide] paper, 1	1
13(c)(ii)	Polishing wheel, buffing machine 1	1
13(c)(iii)	Lacquer applied by brush or spray and suspended to dry to prevent marks 1	1
13(d)(i)	Faceplate, between centres2 × 1	2
13(d)(ii)	Saw off the corners of the block1Use of disc sander, files, glasspaper to finish to shape1Correctly named tools and equipment1	3

Question	Answer	Marks
13(e)	Quality control checks include: dimension checks of various componentparts of the wind chimes, e.g. length of tube, positions of holes, diameter oftop piece. Visual check on quality of finish. 2×2	4
13(f)	Practical idea:allows bracket to be fixed to a wall1chimes secure1materials1constructions1	4
