## MARK SCHEME for the October/November 2015 series

## **0606 ADDITIONAL MATHEMATICS**

0606/11

Paper 1, maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2015 series for most Cambridge IGCSE<sup>®</sup>, Cambridge International A and AS Level components and some Cambridge O Level components.

® IGCSE is the registered trademark of Cambridge International Examinations.

## Abbreviations

| awrt | answers which round to     |
|------|----------------------------|
| cao  | correct answer only        |
| dep  | dependent                  |
| FT   | follow through after error |
| isw  | ignore subsequent working  |
| oe   | or equivalent              |
| rot  | rounded or truncated       |
| SC   | Special Case               |
| soi  | seen or implied            |
| www  | without wrong working      |
|      |                            |

| 1 | $kx^{2} + (2k - 8)x + k = 0$<br>$b^{2} - 4ac > 0 \text{ so } (2k - 8)^{2} - 4k^{2} (>0)$<br>$4k^{2} - 32k + 64 - 4k^{2} (>0)$<br>leading to $k < 2$ only | M1<br>DM1<br>DM1<br>A1 | for attempt to obtain a 3 term quadratic in the<br>form $ax^2 + bx + c = 0$ , where b contains a<br>term in k and a constant<br>for use of $b^2 - 4ac$<br>for attempt to simplify and solve for k<br>A1 must have correct sign |
|---|--|------------------------|--|
|   |  | AI                     | AT must have correct sign  |
| 2 | $\left(\frac{dy}{dx}\right) = -5x(+c)$<br>When $x = -1$ , $\frac{dy}{dx} = 2$ leading to   | M1                     | for attempt to integrate, do not penalise<br>omission of arbitrary constant.   |
|   | u.   |                        |  |
|   | $\frac{\mathrm{d}y}{\mathrm{d}x} = -5x - 3$  | A1                     | Must have $\frac{dy}{dx} = \dots$  |
|   | $y = -\frac{5x^2}{2} - 3x + d$   | DM1                    | for attempt to integrate <i>their</i> $\frac{dy}{dx}$ , but  |
|   | When $x = -1$ , $y = 3$ leading to   |                        | penalise omission of arbitrary constant.   |
|   | $y = \frac{5}{2} - \frac{5x^2}{2} - 3x$  | A1                     |  |
|   | Alternative scheme:  |                        |  |
|   | $y = ax^{2} + bx + c$ so $\frac{dy}{dx} = 2ax + b$   | M1                     | for use of $y = ax^2 + bx + c$ , differentiation<br>and use of conditions to give an equation in <i>a</i><br>and <i>b</i>  |
|   | When $x = -1$ , $\frac{dy}{dx} = 2$  |                        |  |
|   | so $-2a+b=2$   | A1                     | for a correct equation   |
|   | $\frac{\mathrm{d}^2 y}{\mathrm{d}x^2} = 2a$  | DM1                    | for a second differentiation to obtain <i>a</i>  |
|   | so $a = -\frac{5}{2}$ , $b = -3$ , $c = \frac{5}{2}$   | A1                     | for <i>a</i> , <i>b</i> and <i>c</i> all correct   |

## Mark Scheme Cambridge IGCSE – October/November 2015

SyllabusPaper060611

| 3         | $\sqrt{(\sec^2 \theta - 1)} + \sqrt{(\csc^2 \theta - 1)} = \sec \theta \csc \theta$          |          |  |
|-----------|--|----------|--|
|           | $LHS = \tan\theta + \cot\theta$  | B1       | may be implied by the next line  |
|           | $=\frac{\sin\theta}{\cos\theta}+\frac{\cos\theta}{\sin\theta}$                               | B1       | for dealing with $\tan \theta$ and $\cot \theta$ in terms of $\sin \theta$ and $\cos \theta$                       |
|           | $=\frac{\sin^2\theta+\cos^2\theta}{\sin\theta\cos\theta}$                                    | M1       | for attempt to obtain as a single fraction   |
|           | $=\frac{1}{\sin\theta\cos\theta}$  | M1       | for the use of $\sin^2 \theta + \cos^2 \theta = 1$ in correct context  |
|           | $= \sec \theta \csc \theta$  | A1       | Must be convinced as AG  |
|           | Alternate scheme:  |          |  |
|           | LHS = $\tan \theta + \cot \theta$  |          |  |
|           | $= \tan \theta + \frac{1}{\tan \theta}$  | B1       | may be implied by subsequent work  |
|           | $=\frac{\tan^2\theta+1}{\tan\theta}$   | M1       | for attempt to obtain as a single fraction   |
