ADDITIONAL MATHEMATICS Paper 1

MARK SCHEME Maximum Mark: 80

> 0606/01 For examination from 2020

Specimen

© UCLES 2017

This document has 12 pages. Blank pages are indicated.

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question .
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors .
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

0

UCLES 2017

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

MARK SCHEME NOTES

The following notes are intended to aid interpretation of mark schemes in general, but individual mark schemes may include marks awarded for specific reasons outside the scope of these notes.

Types of mark

- M Method marks, awarded for a valid method applied to the problem.
- A Accuracy mark, given for a correct answer or intermediate step correctly obtained. For accuracy marks to be given, the associated Method mark must be earned or implied.
- **B** Mark for a correct result or statement independent of Method marks.

Page 3 of 12

When a part of a question has two or more 'method' steps, the \mathbf{M} marks are in principle independent unless the scheme specifically says otherwise; and similarly where there are several \mathbf{B} marks allocated. The notation 'dep' is used to indicate that a particular \mathbf{M} or \mathbf{B} mark is dependent on an earlier mark in the scheme.

Abbreviations

- AG answer given
- awrt answer which rounds to
- cao correct answer only
- dep dependent
- **FT** follow through after error
- isw ignore subsequent working
- nfww not from wrong working
- oe or equivalent
- rot rounded or truncated
- SC special case
- soi seen or implied

Question	Answer	Marks	Partial Marks
2(a)	$\left[\frac{\mathrm{d}y}{\mathrm{d}x}\right] = \frac{3}{2}\sqrt{x} \text{oe}$	B2	Allow unsimplified, e.g. $\left[\frac{dy}{dx} = \right] x \left(\frac{1}{2}x^{-\frac{1}{2}}\right) + x^{\frac{1}{2}}$ from product rule B1 for $y = x^{\frac{3}{2}}$ or for one correct term in the sum obtained using the product rule
2(b)	[y=8] x=4	B1	
	$\frac{0.015}{\delta x} \approx \left(their \frac{\mathrm{d}y}{\mathrm{d}x} \right _{x=4} \right) \text{oe}$	M1	Condone $\frac{0.015}{\delta x} = \left(their \left. \frac{dy}{dx} \right _{x=4} \right)$
	0.005 oe nfww	A1	

	Question	Answer	Marks	Partial Marks
	3(a)	$12\left(x-\frac{1}{4}\right)^2+\frac{17}{4}$ isw	3	B1 for each of p , q , r correct; Allow correct equivalent values
Page 5 of		(4) 4		If 0 scored, SC2 for $12\left(x-\frac{1}{4}\right)+\frac{17}{4}$
12				or SC1 for correct 3 values but incorrect format
	3(b)	$\frac{4}{17}$ is greatest value when $x = \frac{1}{4}$	2	Strict FT their $\frac{17}{4}$ and their $\frac{1}{4}$
				B1 for $\frac{4}{17}$ and B1 for $x = \frac{1}{4}$
				Each value must be correctly attributed;
				Condone $\left(\frac{1}{4}, \frac{4}{17}\right)$ for B2
				Condone $y = \frac{4}{17}$ for B1

For examination from 2020

Question	Answer	Marks	Partial Marks
4	$AX = \sqrt{45}$ soi	B1	May be implied by $3\sqrt{5}$
	$AX = 3\sqrt{5}$	B1	May be seen later
	$\frac{1}{2}(4+\sqrt{5}+2+x) \times their \sqrt{45}$	M1	May be implied by, e.g. summation of rectangle and two triangles
	$15(\sqrt{5}+2) =$	M1	Must be correct apart from <i>their</i> $\sqrt{45}$
	$\frac{1}{2}(4+\sqrt{5}+2+x) \times their \sqrt{45}$ or better		
	Correctly divide <i>their</i> equation by <i>their</i> $\sqrt{5}$ or <i>their</i> $\sqrt{45}$ and rationalise denominator	M1	or correctly multiply both sides of <i>their</i> equation by <i>their</i> $\sqrt{5}$ or <i>their</i> $\sqrt{45}$ and obtain a rational coefficient of x soi
	Completion to $4 + 3\sqrt{5}$ nfww	A1	
Question	Answer	Marks	Partial Marks
5(a)	Correct shape for both graphs	B2	B1 for either Must touch the <i>x</i> -axis in the correct quadrant
	Correct <i>y</i> -intercept for both graphs and Correct <i>x</i> -intercept for both graphs	B2	B1 for either $y = 2$, $y = 5$ or $x = 2$, $x = -2.5$ or $y = 2$, $x = -2.5$
5(b)	$2x + 5 = \pm (2 - x) \text{ oe}$ or $(2x + 5)^2 = (2 - x)^2$	M1	For attempt to obtain 2 solutions; must be a complete method
	x = -7, x = -1	A1	
	$-7 \leq x \leq -1$	A1	FT <i>their</i> values of <i>x</i>

© UC	Question	Answer	Marks	Partial Marks
LES 201	6	$\frac{1}{2}(2x)(x^2+5)^{-\frac{1}{2}}$ for quotient seen	B1	
7		or $-\frac{1}{2}(2x)(x^2+5)^{-\frac{3}{2}}$ for product seen		
		Correct application of the quotient rule or product rule attempted	M1	
		$\frac{\mathrm{d}y}{\mathrm{d}x} = \frac{2(x^2+5)^{\frac{1}{2}} - \frac{1}{2}(2x)(x^2+5)^{-\frac{1}{2}}(2x-1)}{x^2+5}$	A1	All correct; may be unsimplified
		or $\frac{dy}{dx} = 2(x^2 + 5)^{-\frac{1}{2}} - \frac{1}{2}(2x)(x^2 + 5)^{-\frac{3}{2}}(2x - 1)$		
		x = 2, y = 1	B2	B1 for each
Pag		$\frac{\mathrm{d}y}{\mathrm{d}x} = \frac{4}{9}$		
		Gradient of normal = $-\frac{9}{4}$	M1	Valid attempt to obtain gradient of normal
; 7 of 12		$y-1 = their\left(-\frac{9}{4}\right)(x-2) \text{oe}$	M1	
		9x + 4y = 22	A1	

© UC	Question	Answer	Marks	Partial Marks
LES 2	7(a)	$20 = \pi x^2 + xy$	B1	
017		$y = \frac{20 - \pi x^2}{x}$	B1	
		$P = 2\pi x + 2x + 2y$ = $2\pi x + 2x + 2\left(\frac{20}{x} - \pi x\right)$	M1	Attempt to use perimeter and obtain in terms of x only
		$=2x+\frac{40}{x}$	A1	For all steps seen, nfww AG
	7(a)	Alternative		
		$20 = \pi x^2 + xy \text{ and}$ $P = 2\pi x + 2x + 2y$	B1	
Pag		$P = \frac{2}{x}(\pi x^2 + xy) + 2x$	M1	For attempt to use perimeter and write in $\frac{\pi x^2 + xy}{x}$
e 8 of 12		$=\frac{2}{x}(20)+2x$	B1	For replacing $\pi x^2 + xy$ with 20
		$=2x+\frac{40}{x}$	A1	For all steps seen, nfww AG
	7(b)	$\frac{dP}{dx} = 2 - \frac{40}{x^2}$ When $\frac{dP}{dx} = 0$ $x = 2\sqrt{5} \text{ or } 4.47 \text{ or } \sqrt{20}$ Leading to $P = 8\sqrt{5} \text{ or } 17.9$ $\frac{d^2P}{dx^2} = \frac{80}{x^3}$	5	M1 for attempt to differentiate DM1 for equating to zero and attempt to solve at least as far as $x^2 =$ A1 for x A1 for P A1 for this statement or use of gradient inspection either side of correct x
		Always positive so a minimum oe
