PHYSICAL SCIENCE

0652/21

Paper 2 (Core)

October/November 2012

1 hour 15 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

## **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs, tables or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

A copy of the Periodic Table is printed on page 16.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

| For Exam | iner's Use |
|----------|------------|

| Total    |            |

This document consists of 16 printed pages.

**1** Fig. 1.1 shows an uncalibrated liquid-in-glass thermometer.

Fig. 1.1

| (a) | (i)  | Name a suitable liquid to use in the thermometer.  |             |
|-----|------|--|-------------|
|     | (ii) | State the physical property of the liquid on which the operation of the thermomedepends. | [1]<br>eter |
|     |      |  | [1]         |
| (b) | (i)  | Explain what is meant by a fixed point.  |             |
|     |      |  |             |
|     |      |  |             |
|     |      |  | [2]         |
|     | (ii) | What are the values of the fixed points on the Celsius temperature scale?                |             |
|     |      | upper fixed point  |             |
|     |      | lower fixed point  | [2]         |
| (c) | The  | e thermometer is to be calibrated.   |             |
|     | The  | e two fixed points are marked on the thermometer.  |             |
|     | Des  | scribe the remaining stages in calibrating the thermometer.                              |             |
|     |      |  |             |
|     |      |  |             |
|     |      |  | [2]         |

| 2 | Chlor | ine | is a member of Group VII of the Periodic Table.  |  |
|---|-------|-----|--|--|
|   | (a) ( | i)  | State the name given to Group VII elements.  |  |
|   |       |     | [1]  |  |
|   | (i    | i)  | Name a Group VII element which is less reactive than chlorine.   |  |
|   |       |     | [1]  |  |
|   | (ii   | i)  | Name the Group I element which is in the same Period as chlorine.                                      |  |
|   |       |     | [1]  |  |
|   |       |     | nplete Table 2.1 by giving the name and chemical formula of an ionic and a alent compound of chlorine. |  |

Table 2.1

| compound | name | formula |
|----------|------|---------|
| ionic    |      |         |
| covalent |      |         |

[4]

For Examiner's Use **3** Fig. 3.1 shows a man balancing on a tightrope.

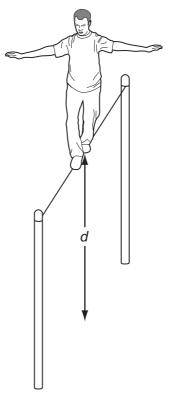

Fig. 3.1

- (a) On Fig. 3.1 mark a possible position of the centre of mass of the man. Label it C. [1]
- (b) The mass of the man is 75 kg.

| (i) | Explain | what is | meant by | ı mass. |
|-----|---------|---------|----------|---------|
|-----|---------|---------|----------|---------|

[1]

(ii) Calculate the weight of the man.

$$[g = 10 \, \text{N/kg}]$$

weight = [2]

(c) The man jumps off the tightrope.

The graph in Fig. 3.2 shows his speed in a vertical direction after jumping.

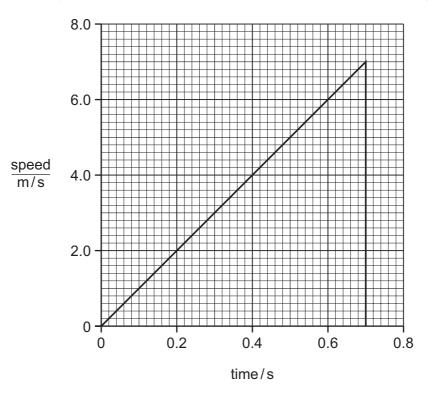

Fig. 3.2

Use Fig. 3.2 to find

(i) the maximum speed of the man,

(ii) the height, *d*, of the wire above the ground.

$$d = m$$
 [3]

(d) (i) Name the form of energy the man has due to his motion as he falls to the ground.

[1]

(ii) Suggest what happens to this energy when he hits the ground.

[2]

© UCLES 2012 0652/21/O/N/12 **[Turn over** 

**4** Fig. 4.1 shows apparatus used to react copper(II) oxide with hydrogen.

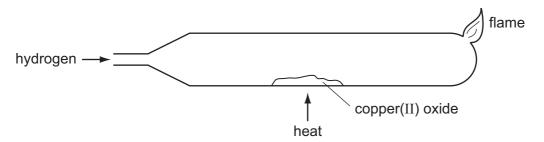

Fig. 4.1

| (a) | (i)   | Copper(II) oxide is black.   |
|-----|-------|--|
|     |       | State the colour change you would see when $copper(\Pi)$ oxide is reduced to $copper$ by hydrogen.           |
|     |       |  |
|     |       | [1]  |
|     | (ii)  | Write a balanced equation for this reaction.   |
|     |       | [1]  |
|     |       |  |
|     | (iii) | Explain what this reaction shows about the relative reactivity of copper and of hydrogen.                    |
|     |       |  |
|     |       | [1]  |
| (b) |       | scribe how you could show that carbon (charcoal) is more reactive than copper and s reactive than magnesium. |
|     |       |  |
|     |       |  |
|     |       |  |
|     |       | [6]  |

| 5 |     | monium sulfate, $(NH_4)_2SO_4$ , and ammonium nitrate, $NH_4NO_3$ , are important ogen-containing fertilisers. | For<br>Examiner's<br>Use |
|---|-----|--|--------------------------|
|   | (a) | Name <b>two</b> substances which react together to make ammonium nitrate.                                      |                          |
|   |     | 1  |                          |
|   |     | 2[2]   |                          |
|   | (b) | Calculate the relative molecular mass of ammonium sulfate.   |                          |
|   |     | [Relative atomic masses: A <sub>r</sub> : H,1; N,14; O,16; S,32.]  |                          |
|   |     |  |                          |
|   |     |  |                          |
|   |     |  |                          |
|   |     |  |                          |
|   |     | answer [2]   |                          |
|   | (c) | Show by calculation that there is 35% nitrogen by mass in ammonium nitrate, NH <sub>4</sub> NO <sub>3</sub> .  |                          |
|   |     | [Relative molecular mass of ammonium nitrate is 80]  |                          |
|   |     |  |                          |
|   |     |  |                          |
|   |     |  |                          |
|   |     |  |                          |
|   |     | [2]  |                          |
|   | (d) | Ammonium sulfate contains less nitrogen by mass than ammonium nitrate.   |                          |
|   |     | Suggest why ammonium sulfate is sometimes preferred as a fertiliser.   |                          |
|   |     | [1]  |                          |
|   |     |  |                          |

**6** Fig. 6.1 shows the refraction of red light as it passes through a parallel sided glass block.

For Examiner's Use

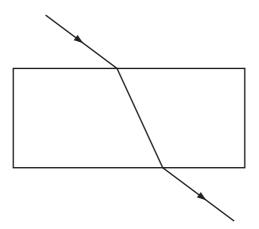

Fig. 6.1

- (a) On Fig. 6.1 mark
  - (i) an angle of incidence and label it i,

[1]

(ii) an angle of refraction and label it r.

[1]

**(b)** Blue light refracts more than red light.

Blue light is shone along the same incident path as the red light.

On Fig. 6.1, draw the path of the blue light as it passes through the block and emerges into the air. [2]

(c) Fig. 6.2 shows a parallel beam of light incident on a converging lens.

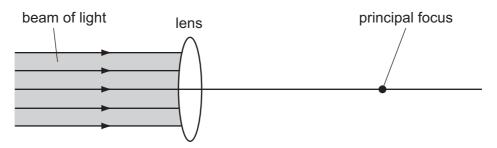

Fig. 6.2

- (i) On Fig. 6.2 draw rays to show the path of the light after it passes through the lens. [3]
- (ii) On Fig. 6.2 draw an arrow to show the focal length of the lens. [1]
- (d) Powerful lenses are usually very thick.

Images formed by these lenses have coloured edges.

Suggest and explain a reason for this. You will find it helpful to use the information from parts **(b)** and **(c)** in your explanation.

| <br>[2] |
|---------|

7 Danielle is investigating the resistance of a length of constantan wire.

She builds the circuit shown in Fig. 7.1.

For Examiner's Use

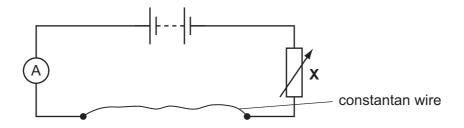

Fig. 7.1

- (ii) Name the component labelled X. [1]

  (iii) Explain the use of this component in the circuit. [1]

  (iii) On Fig. 7.1, show how Danielle should connect a meter to measure the potential
- difference across the wire. [2]
- **(b)** When the potential difference across the constantan wire is 4.5 V, the reading on the ammeter is 0.12 A.

Calculate the resistance of the constantan wire.

resistance = \_\_\_\_ unit \_\_\_\_ [3]

| (c) | Dar  | nielle connects a second identical constantan wire in parallel with the original wire.         | Ex |
|-----|------|--|----|
|     | Stat | te how   |    |
|     | (i)  | the total resistance in the circuit changes,   |    |
|     |      | [1]  |    |
|     | (ii) | the reading on the ammeter changes.  |    |
|     |      | [1]  |    |
| (d) |      | nird piece of constantan wire has the same length as the original wire but has a ler diameter. |    |
|     | Stat | te how the resistance of the third wire compares with the resistance of the original e.        |    |
|     | Give | e a reason for your answer.  |    |
|     |      |  |    |
|     |      |  |    |
|     |      | [2]  |    |

For Examiner's Use **8** Fig. 8.1 shows apparatus used in an experiment to react hydrochloric acid with excess calcium carbonate to produce carbon dioxide.

For Examiner's Use

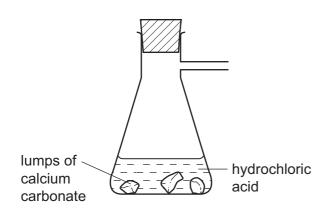

Fig. 8.1

- (a) Complete Fig. 8.1 to show apparatus used to collect and measure the volume of the carbon dioxide. [2]
- (b) Describe a test to show that the gas collected is carbon dioxide.

| test   |   |     |
|--------|---|-----|
| result | t | [2] |

**(c)** Table 8.1 shows the volume of carbon dioxide collected during the experiment.

Table 8.1

| time/minutes | volume of carbon dioxide collected/cm³ |  |  |  |
|--------------|--|--|--|--|
| 0            | 0                                      |  |  |  |
| 1            | 15                                     |  |  |  |
| 2            | 26                                     |  |  |  |
| 3            | 34                                     |  |  |  |
| 4            | 40                                     |  |  |  |
| 5            | 40                                     |  |  |  |

[1] For Examiner's Use

[2]

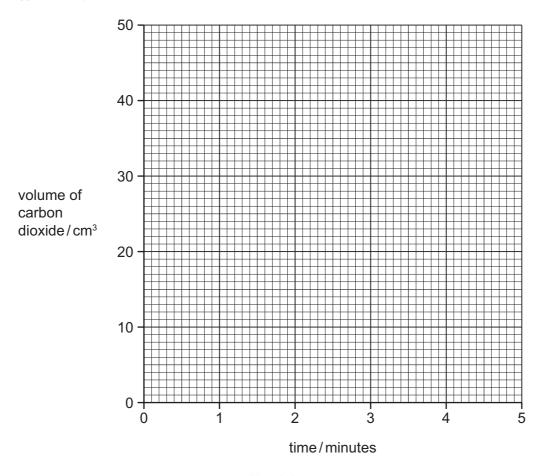

Fig. 8.2

- (ii) On Fig. 8.2, draw the curve of best fit.
- (iii) Explain why the reaction stops after 4 minutes.

[1]

(iv) The experiment is repeated using the same mass of calcium carbonate. This time powder is used instead of lumps.

On Fig. 8.2, sketch the curve for this experiment. [2]

**9 (a)** Complete Table 9.1 to show the gases formed, if any, when each of the substances listed react with dilute sulfuric acid.

For Examiner's Use

Table 9.1

| substance added  | gas, if any, formed |  |  |  |  |
|------------------|---------------------|--|--|--|--|
| copper           |                     |  |  |  |  |
| magnesium        |                     |  |  |  |  |
| sodium carbonate |                     |  |  |  |  |

[3]

**(b)** A salt is formed when a metal oxide neutralises an acid.

Complete the word equation for this reaction.

metal oxide + acid → salt +

**10** (a) Fig. 10.1 shows the structure of the alkane, ethane.

Fig. 10.1

Draw a similar diagram to show the structure of the alkene, ethene.

|     |      | ethene  | [2] |
|-----|------|---|-----|
| (b) | Nar  | me an alkane with four carbon atoms and give its formula. |     |
|     | nan  | ne  |     |
|     | forn | nula  | [2] |
| (c) | (i)  | Explain why ethene is more reactive than ethane.          |     |
|     |      |   | [1] |
|     | (ii) | Explain why ethene is important in the chemical industry. |     |
|     |      |   |     |
|     |      |   | [1] |
