## Cambridge IGCSE ${ }^{\text {TM }}$

## CO-ORDINATED SCIENCES

0654/12
Paper 1 Multiple Choice (Core)
October/November 2021
45 minutes
You must answer on the multiple choice answer sheet.

## You will need: Multiple choice answer sheet

Soft clean eraser
Soft pencil (type B or HB is recommended)

## INSTRUCTIONS

- There are forty questions on this paper. Answer all questions.
- For each question there are four possible answers A, B, C and D. Choose the one you consider correct and record your choice in soft pencil on the multiple choice answer sheet.
- Follow the instructions on the multiple choice answer sheet.
- Write in soft pencil.
- Write your name, centre number and candidate number on the multiple choice answer sheet in the spaces provided unless this has been done for you.
- Do not use correction fluid.
- Do not write on any bar codes.
- You may use a calculator.

## INFORMATION

- The total mark for this paper is 40 .
- Each correct answer will score one mark.
- Any rough working should be done on this question paper.
- The Periodic Table is printed in the question paper.

1 All living organisms can break down nutrient molecules to release energy.
What is this process?
A excretion
B growth
C nutrition
D respiration

2 The diagram shows a plant cell as seen under a light microscope.
Which structure is also found in animal cells?

3 Which molecule contains carbon?
A ammonia
B fat
C sulfuric acid
D water

4 A student carried out an investigation on the effect of temperature on an enzyme-controlled reaction. The results are shown.

Which labels does the student need to add for the axes labelled axis 1 and axis 2 ?

|  | axis 1 | axis 2 |
| :---: | :---: | :---: |
| A | rate of reaction | temperature |
| B | rate of reaction | time |
| C | temperature | rate of reaction |
| D | time | rate of reaction |

5 The diagram shows an experiment to investigate photosynthesis. When leaves photosynthesise, they store some carbohydrates as starch.

Potassium hydroxide absorbs carbon dioxide.

After standing in sunlight for 10 hours, leaf $L$ contained no starch but leaf $M$ contained a lot of starch.

What does this show?
A A leaf cannot make starch in a sealed flask.
B A leaf cannot make starch without carbon dioxide.
C A leaf cannot make starch without light.
D A leaf cannot make starch without oxygen.

6 What is the name of the process which moves soluble food molecules through the wall of the small intestine into the blood?

A absorption
B assimilation
C digestion
D ingestion

7 The diagram shows a section through a mammalian heart.
Which vessel is the pulmonary vein?

8 The graph shows the changes in volume of air in the lungs at rest and during exercise.

What was the effect of exercise on the rate and depth of breathing?

|  | rate of breathing | depth of breathing |
| :---: | :---: | :---: |
| A | decrease | decrease |
| B | decrease | increase |
| C | increase | decrease |
| D | increase | increase |

9 Adrenaline is injected into the blood to treat some medical conditions.
What would happen as a result of injecting adrenaline?
1 narrowing of the pupil in the eye
2 increased breathing rate
3 increased pulse rate
A 1 and 2 only
B 1 and 3 only
C 2 and 3 only
D 1, 2 and 3

10 The diagram shows the female reproductive system.
Which labelled part is the cervix?

11 In a species of flowering plant, the allele for red flowers is dominant to the allele for white flowers.
A plant breeder crossed a homozygous white-flowered plant with a heterozygous red-flowered plant.

What is the expected phenotypic ratio of the next generation of plants?
A 1 white: 1 red
B 3 red: 1 white
C 3 white: 1 red
D all the plants will be red

12 Which organism is a secondary consumer in the food chain shown?
A
B
C
D
plant $\rightarrow$ herbivore $\rightarrow$ carnivore $\rightarrow$ top carnivore

13 The diagram shows a simplified carbon cycle.
Which labelled arrow represents respiration?

14 Which row correctly identifies the named changes?

|  | physical changes | chemical changes |
| :---: | :---: | :---: |
| A | condensation and combustion | evaporation and neutralisation |
| B | evaporation and neutralisation | condensation and combustion |
| C | condensation and evaporation | combustion and neutralisation |
| D | combustion and neutralisation | condensation and evaporation |

15 Which row describes the physical properties of the named substances?

|  | substance | solubility <br> in water | electrical <br> conductivity <br> as a solid | electrical <br> conductivity <br> as a liquid |
| :---: | :---: | :---: | :---: | :---: |
| A | ammonia | low | good | good |
| B | copper chloride | high | poor | good |
| C | iron nitrate | high | good | good |
| D | potassium chloride | low | poor | poor |

16 A model of a molecule is shown.
 key

〇 hydrogen atom

Which row shows the formula of this molecule and describes the type of bonding between the atoms?

|  | formula | bonding |
| :---: | :---: | :---: |
| A | $2 \mathrm{BH}_{3}$ | covalent |
| B | $2 \mathrm{BH}_{3}$ | ionic |
| C | $\mathrm{B}_{2} \mathrm{H}_{6}$ | covalent |
| D | $\mathrm{B}_{2} \mathrm{H}_{6}$ | ionic |

17 The diagram shows the electrolysis of a compound.

When the switch is closed, the solution around electrode $P$ turns orange because a halogen is formed.

The positive electrode $P$ is called the $\qquad$ , and the halogen is $\qquad$ 2......

Which words complete gaps 1 and 2?

|  | 1 | 2 |
| :---: | :---: | :---: |
| A | anode | bromine |
| B | anode | chlorine |
| C | cathode | bromine |
| D | cathode | chlorine |

18 Magnesium ribbon is added to dilute hydrochloric acid.
Which observation shows that this process is exothermic?
A The pH of the solution decreases.
B The pH of the solution increases.
C The temperature of the solution decreases.
D The temperature of the solution increases.

19 A known mass of solid sodium carbonate is added to excess hydrochloric acid.
Which conditions give the shortest reaction time?

|  | solid particle <br> size | acid <br> concentration |
| :---: | :---: | :---: |
| A | large | high |
| B | large | low |
| C | small | high |
| D | small | low |

20 A white solid $X$ dissolves in dilute hydrochloric acid. A gas is produced which turns limewater milky.

A flame test is carried out on solid X and produces a red coloured flame.
What is X ?
A lithium carbonate
B lithium chloride
C potassium carbonate
D potassium chloride

21 Some properties of different metals are shown.

|  | $\frac{\text { density }}{\mathrm{g} / \mathrm{cm}^{3}}$ | melting point $/{ }^{\circ} \mathrm{C}$ | colour of compound <br> formed by the metal |
| :---: | :---: | :---: | :---: |
| 1 | 1.54 | 851 | white |
| 2 | 8.91 | 1455 | green |
| 3 | 5.80 | 1890 | lilac |
| 4 | 11.3 | 328 | white |

Which metals are transition elements?
A 1 and 2
B 1 and 4
C 2 and 3
D 3 and 4

22 Why does the steel used to make a drill contain manganese?
A to increase the density of the steel
B to increase the hardness of the steel
C to increase the malleability of the steel
D to increase the melting point of the steel

23 Which colour is observed when water is added to anhydrous copper(II) sulfate?
A blue
B green
C pink
D white

24 Which process does not produce carbon dioxide?
A complete combustion of fossil fuels
B reaction of an acid with a carbonate
C respiration in plants
D rusting iron

25 Which compound is used to neutralise acidic gases?
A calcium carbonate
B calcium chloride
C calcium phosphate
D calcium sulfate

26 Four molecules are shown.
Which structure represents ethanol?
A

B

C

27 Which process produces alkenes from alkanes?
A combustion
B cracking
C oxidation
D reduction

28 Which speed-time graph represents the motion of an object in free fall with no air resistance?
A

D

29 What is meant by the moment of a force?
A the speed of an object moved by a force
B the time taken for a force to move an object
C the turning effect of a force
D the work done by a force

30 A stone falls from a bench.
Which row describes how the gravitational potential energy and the kinetic energy of the stone change as it falls?

|  | gravitational <br> potential energy | kinetic energy |
| :---: | :---: | :---: |
| A | decreases | increases |
| B | decreases | stays the same |
| C | increases | decreases |
| D | increases | stays the same |

31 Four different kettles contain different masses of water.
They are used to heat the water from $20^{\circ} \mathrm{C}$ to $100^{\circ} \mathrm{C}$.
Each kettle takes a different amount of time to do this.
Which kettle has the lowest useful power output?

|  | mass of <br> water $/ \mathrm{g}$ | time to heat water <br> to $100^{\circ} \mathrm{C} /$ minute |
| :---: | :---: | :---: |
| A | 1000 | 3.0 |
| B | 1000 | 5.0 |
| C | 2500 | 3.0 |
| D | 2500 | 5.0 |

32 Which labelled arrow on the diagram represents condensation?

33 The diagram shows a ray of light striking a plane mirror.

What is the angle of reflection?
A $20^{\circ}$
B $40^{\circ}$
C $70^{\circ}$
D $90^{\circ}$

34 The diagrams $P, Q, R$ and $S$ show four pairs of bar magnets.

P
$\mathrm{N} \quad \mathrm{S}$
$\mathrm{S} \quad \mathrm{N}$

R

## S

$\mathrm{N} \quad \mathrm{S}$

For which two pairs of magnets is there a force of attraction between the magnets?
A P and Q
B Q and R
C $R$ and S
D Pand S

35 A rod is rubbed with a dry piece of cloth. A scientist holds the rod in her hand and brings it close to a negatively charged plastic strip. The strip is suspended by an insulating thread.

As the rod approaches the plastic strip, the strip moves towards the rod.

Which statement is correct?
A The rod is a negatively charged electrical conductor.
B The rod is a negatively charged electrical insulator.
C The rod is a positively charged electrical conductor.
D The rod is a positively charged electrical insulator.

36 Two lamps are connected in the circuit shown.

Which of these two statements about the circuit are correct?
1 There is a separate switch to control each lamp.
2 The ammeter measures the current in both lamps.
A neither 1 nor 2
B 1 only
C 2 only
D 1 and 2

37 Three resistors are connected in series with a battery, as shown.

The current at point $P$ is 6.0 A .
What is the current at point Q ?
A 0 A
B $\quad 2.0 \mathrm{~A}$
C $\quad 3.0 \mathrm{~A}$
D $\quad 6.0 \mathrm{~A}$

38 An electric kettle, washing machine and cooker are all switched on and connected through an extension cable into a single mains socket.

What is the electrical hazard of this arrangement?
A The cooker overheats.
B The extension cable overheats.
C The kettle overheats.
D The washing machine overheats.

39 There is a current in a coil of wire. The coil rotates between the poles of a magnet.
Which change does not increase the turning effect on the coil?
A increasing the current in the coil
B reversing the current
C using a stronger magnet
D using more turns in the coil

40 The table gives information about four nuclides $P, Q, R$ and $S$.

| nuclide | number of <br> protons | number of <br> neutrons |
| :---: | :---: | :---: |
| P | 81 | 123 |
| Q | 82 | 122 |
| R | 82 | 123 |
| S | 83 | 121 |

Which nuclides are isotopes of the same element?
A P and Q
B PandR
C Q and R
D Q and S
