

## Cambridge O Level

CHEMISTRY 5070/11

Paper 1 Multiple Choice May/June 2022

1 hour

You must answer on the multiple choice answer sheet.

You will need: Multiple choice answer sheet

Soft clean eraser

Soft pencil (type B or HB is recommended)

## **INSTRUCTIONS**

There are forty questions on this paper. Answer all questions.

- For each question there are four possible answers **A**, **B**, **C** and **D**. Choose the **one** you consider correct and record your choice in soft pencil on the multiple choice answer sheet.
- Follow the instructions on the multiple choice answer sheet.
- Write in soft pencil.
- Write your name, centre number and candidate number on the multiple choice answer sheet in the spaces provided unless this has been done for you.
- Do not use correction fluid.
- Do not write on any bar codes.
- You may use a calculator.

## **INFORMATION**

- The total mark for this paper is 40.
- Each correct answer will score one mark.
- Any rough working should be done on this question paper.
- The Periodic Table is printed in the question paper.

This document has 16 pages. Any blank pages are indicated.

[Turn over

**1** A scientist needs to add approximately 100 cm<sup>3</sup> of water to each of 50 large beakers. The scientist needs to fill the beakers as quickly as possible.

Which method should be used?

- **A** A 50 cm<sup>3</sup> burette should be used twice for each beaker.
- **B** A 100 cm<sup>3</sup> gas syringe should be used once for each beaker.
- **C** A 25 cm<sup>3</sup> graduated pipette should be used four times for each beaker.
- **D** A 100 cm<sup>3</sup> measuring cylinder should be used once for each beaker.
- **2** Four mixtures, each containing two substances, are shown in the table.

The two substances need to be separated and collected.

Which row is correct?

|   | mixture                      | separation method       |
|---|------------------------------|-------------------------|
| Α | copper(II) sulfate and water | chromatography          |
| В | methanol and ethanol         | evaporation             |
| С | oxygen and nitrogen          | fractional distillation |
| D | sand and barium sulfate      | filtration              |

- **3** Two samples of a colourless solution are tested separately with aqueous sodium hydroxide, NaOH(aq), and aqueous ammonia, NH<sub>3</sub>(aq), and the results are recorded.
  - A white precipitate is formed with two drops of NaOH(aq). This precipitate dissolves in an excess of NaOH(aq).
  - A white precipitate is formed with two drops of NH<sub>3</sub>(aq). This precipitate dissolves in an excess of NH<sub>3</sub>(aq).

What can be deduced from these results?

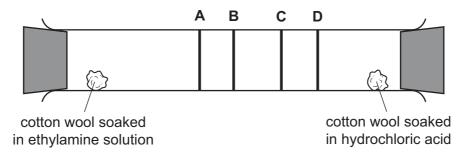

- **A** The anion present is  $Cl^-$ .
- **B** The anion present is not  $Cl^-$ .
- **C** The cation present is  $Al^{3+}$ .
- **D** The cation present is  $Zn^{2+}$ .

4 Which row correctly describes changes in the particles when a substance freezes?

|   | arrangement of the particles  | energy change in the particles |
|---|-------------------------------|--------------------------------|
| Α | particles become more ordered | particles gain energy          |
| В | particles become more ordered | particles lose energy          |
| С | particles become less ordered | particles gain energy          |
| D | particles become less ordered | particles lose energy          |

**5** Ethylamine gas, C<sub>2</sub>H<sub>5</sub>NH<sub>2</sub>, and hydrogen chloride gas, HC*l*, react together to form a white solid, ethylamine hydrochloride.

At which position in the tube would a ring of solid white ethylamine hydrochloride form?

**6** Two particles have the symbols  ${}^{54}_{26}$ Fe  ${}^{2+}$  and  ${}^{59}_{27}$ Co  ${}^{3+}$ .

Which statement about these particles is correct?

- **A** They contain the same number of electrons.
- **B** They contain the same number of neutrons.
- **C** They contain the same number of protons.
- **D** They do not contain the same number of protons, neutrons or electrons.
- **7** Two isotopes of chlorine are  $^{35}Cl$  and  $^{37}Cl$ .

Using these isotopes and  $^{12}$ C and  $^{1}$ H, how many different relative molecular masses are possible for the compound with molecular formula  $C_2H_3Cl_3$ ?

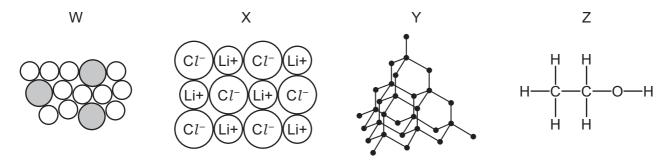

**A** 2

**B** 3

C 4

**D** 5

8 Which statement about the substances, at room temperature and pressure, is correct?

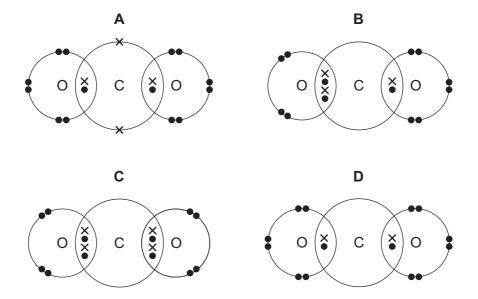

- A W and X conduct electricity.
- **B** W and Y are elements.
- C X and Z dissolve in water.
- **D** Y and Z have low melting points.
- **9** A piece of magnesium reacts with dilute hydrochloric acid.

The resulting solution is then evaporated leaving a solid residue of magnesium chloride.

Which statement is correct?

- **A** A covalent solid is formed in this process.
- **B** Each chlorine atom gains one electron in this process.
- **C** Each magnesium atom loses only one electron in this process.
- **D** Molecules of an element are formed during the reaction.
- **10** Which dot-and-cross diagram represents carbon dioxide?

Only outer shell electrons are shown.

11 Two statements about the structure and properties of metals are given.

statement 1 Metals are malleable and have high melting points.

statement 2 Metals have mobile electrons in their structure.

What is correct?

- A Both statements are correct and statement 2 explains statement 1.
- **B** Both statements are correct but statement 2 does not explain statement 1.
- **C** Statement 1 is correct but statement 2 is incorrect.
- **D** Statement 2 is correct but statement 1 is incorrect.
- 12 How many different elements are present in ammonium nitrate?
  - **A** 2
- **B** 3
- **C** 4
- **D** 5

**13** Aqueous calcium hydroxide is an alkali. It is neutralised by dilute nitric acid to produce calcium nitrate and water.

What is the ionic equation for this reaction?

$$\textbf{A} \quad \text{Ca}^{\scriptscriptstyle +} + \text{OH}^{\scriptscriptstyle -} + \text{H}^{\scriptscriptstyle +} + \text{NO}_3^{\scriptscriptstyle -} \rightarrow \text{CaNO}_3 + \text{H}_2\text{O}$$

**B** Ca(OH)<sub>2</sub> + 2HNO<sub>3</sub> 
$$\rightarrow$$
 Ca(NO<sub>3</sub>)<sub>2</sub> + H<sub>2</sub>O

$$\textbf{C} \quad \text{Ca$^{2^+}$(OH$^-$)$}_2 \ + \ 2\text{H}^+\text{NO}_3^- \ \to \ \text{Ca$^{2^+}$(NO}_3^-$)$}_2 \ + \ \text{H}_2\text{O}$$

$$\mathbf{D} \quad \mathsf{OH}^- + \mathsf{H}^+ \rightarrow \mathsf{H}_2\mathsf{O}$$

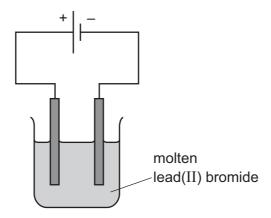

**14** The relative molecular mass,  $M_r$ , of liquid Z is 60. Z contains 40.0% carbon, 6.70% hydrogen and 53.3% oxygen.

Which row shows the correct empirical and molecular formulae of Z?

|   | empirical<br>formula | molecular<br>formula |
|---|----------------------|----------------------|
| Α | CH₂O                 | CH₂O                 |
| В | CH₂O                 | $C_2H_4O_2$          |
| С | $C_2H_4O_2$          | $C_2H_4O_2$          |
| D | CH₃O                 | $C_2H_6O_2$          |

- 15 How many tonnes of aluminium oxide,  $Al_2O_3$ , are required to produce 27 tonnes of aluminium?
  - **A** 27
- **B** 51
- **C** 54
- **D** 102

**16** Lead(II) bromide is electrolysed using inert electrodes.

Which statement is correct?

- **A** A brown gas is seen at the positive electrode.
- **B** Electrons pass through the solution from one electrode to the other.
- **C** lons pass through the circuit from one electrode to the other.
- **D** The lead(II) ions are oxidised.
- 17 Compound X is sodium iodide, NaI.

Compound Y is methyl methanoate, HCO<sub>2</sub>CH<sub>3</sub>.

At room temperature and pressure, .....1..... solid. In aqueous solution, .....2..... electricity.

Which words correctly complete gaps 1 and 2?

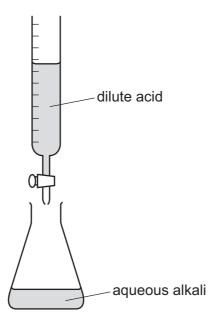

|   | 1                | 2                    |
|---|------------------|----------------------|
| Α | both X and Y are | both X and Y conduct |
| В | both X and Y are | only X conducts      |
| С | only X is        | both X and Y conduct |
| D | only X is        | only X conducts      |

**18** For the forward reaction of a reversible reaction, the enthalpy change of reaction,  $\Delta H$ , is -50 kJ/mol and the activation energy,  $E_a$ , is +60 kJ/mol.

What is the activation energy of the reverse reaction?

- **A** −110 kJ/mol
- B -10 kJ/mol
- C +10 kJ/mol
- **D** +110 kJ/mol

**19** The diagram shows a titration experiment.

Which row about the reaction in the conical flask is correct?

|   | the reaction is | the value of $\Delta H$ is |
|---|-----------------|----------------------------|
| Α | endothermic     | negative                   |
| В | endothermic     | positive                   |
| С | exothermic      | negative                   |
| D | exothermic      | positive                   |

20 Sulfur dioxide reacts with oxygen in the air.

$$2SO_2(g) + O_2(g) \rightleftharpoons 2SO_3(g)$$
  $\Delta H = -196 \text{ kJ/mol}$ 

The reaction is very slow if no catalyst is present.

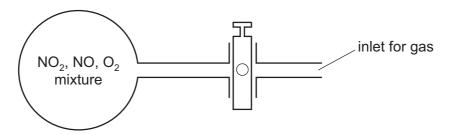

Which statement explains this?

- A Air contains only 21% oxygen so there is not enough oxygen for all the sulfur dioxide to react.
- **B** Only a small proportion of the sulfur dioxide and oxygen molecules have enough energy to react, even at high temperatures.
- **C** The reaction is exothermic and so at high temperatures the equilibrium shifts to the left.
- **D** The reaction is reversible and so products turn back to reactants; this happens more quickly at high temperatures.

- 21 Which statement is correct?
  - A An enzyme is a biological catalyst that decreases the activation energy of a reaction.
  - **B** An enzyme is a biological catalyst that increases the activation energy of a reaction.
  - **C** An enzyme is a compound of a transition element that decreases the activation energy of a reaction.
  - **D** An enzyme is a compound of a transition element that increases the activation energy of a reaction.
- 22 Nitrogen dioxide, NO<sub>2</sub>, is a dark brown gas that decomposes as shown in the equation.

$$2NO_2(g) \rightleftharpoons 2NO(g) + O_2(g)$$
  
dark brown colourless

The diagram shows a glass flask containing a mixture of the three gases. The mixture is pale brown.

More oxygen is forced into the flask.

Which colour change is seen in the mixture?

- A It becomes a darker brown.
- **B** It becomes a paler brown.
- C It turns colourless.
- **D** There is no change.
- **23** Concentrated hydrochloric acid is oxidised by manganese(IV) oxide, MnO<sub>2</sub>.

What are two products of this reaction?

- **A**  $Mn^{2+}$  and  $Cl^{-}$
- **B**  $Mn^{2+}$  and  $Cl_2$
- **C** Mn<sup>6+</sup> and C $l^-$
- **D**  $Mn^{6+}$  and  $Cl_2$

**24** The table gives some information about four redox reactions.

Which row gives correct information about what is oxidised and the evidence that this is oxidation?

|   | equation   | what is oxidised in the reaction | evidence for this oxidation             |
|---|--|----------------------------------|---|
| A | $CuO(s) + C(s) \rightleftharpoons CO(g) + Cu(s)$                   | copper                           | copper oxide has given oxygen to carbon |
| В | $Na(s) + \frac{1}{2}Cl_2(g) \rightleftharpoons NaCl(s)$            | sodium                           | sodium has<br>lost an electron          |
| С | $N_2(g) + 3H_2(g) \rightleftharpoons 2NH_3(g)$                     | nitrogen                         | nitrogen has<br>gained hydrogen         |
| D | $Zn(NO_3)_2(aq) + Mg(s) \rightleftharpoons Mg(NO_3)_2(aq) + Zn(s)$ | zinc                             | zinc has gained<br>two electrons        |

- 25 Which statement about acids and bases is correct?
  - A All strong acids react with carbonates but all weak acids do not.
  - **B** The oxides of Group I metals are amphoteric.
  - **C** The pH of  $1.0\,\text{mol/dm}^3$  ethanoic acid, CH<sub>3</sub>COOH, is higher than the pH of  $1.0\,\text{mol/dm}^3$  sulfuric acid, H<sub>2</sub>SO<sub>4</sub>.
  - **D** The pH of  $1.0\,\text{mol/dm}^3$  nitric acid, HNO<sub>3</sub>, is lower than the pH of  $1.0\,\text{mol/dm}^3$  hydrochloric acid, HC*l*.

2 and 3 only

- 26 Some types of chemical reaction are listed.
  - 1 acid-base
  - 2 combustion
  - 3 redox

Which types of reaction occur in a blast furnace during the extraction of iron?

- **A** 1, 2 and 3 **B** 1 and 2 only **C** 1 and 3 only
- 27 Which method should be used to make a pure sample of potassium chloride?
  - **A** adding AgCl(s) to KNO<sub>3</sub>(aq)
  - **B** adding excess K<sub>2</sub>CO<sub>3</sub>(s) to HC*l*(aq)
  - **C** mixing KNO<sub>3</sub>(aq) with NaCl(aq)
  - **D** titrating KOH(aq) with HC*l*(aq)

**28** A pure sample of lead sulfate is made by reacting aqueous solutions of two salts. The lead sulfate formed is then separated from the mixture.

Which solutions and method of separation are used?

|   | salt solution 1 | salt solution 2   | method of separation |
|---|-----------------|-------------------|----------------------|
| Α | lead chloride   | sodium sulfate    | crystallisation      |
| В | lead chloride   | sodium sulfate    | filtration           |
| С | lead nitrate    | potassium sulfate | crystallisation      |
| D | lead nitrate    | potassium sulfate | filtration           |

- 29 Which statement is correct?
  - A Food can be preserved by using sulfur dioxide.
  - **B** In the Contact process oxygen reacts with sulfur to make sulfur trioxide.
  - **C** Sulfur dioxide is used to kill bacteria present in wood pulp.
  - **D** Sulfuric acid is used as a bleach.
- **30** Element Y is in Period 3 of the Periodic Table. It forms a chloride that is a liquid at room temperature.

Which row shows correct information about the group number and the nature of the oxide of element Y?

|   | group number | nature of oxide |
|---|--------------|-----------------|
| Α | 1            | basic           |
| В | II           | acidic          |
| С | IV           | amphoteric      |
| D | VI           | acidic          |

- **31** Which gases are used in light bulbs?
  - 1 argon
  - 2 oxygen
  - 3 neon
  - **A** 1 only **B** 1 and 2 only **C** 1 and 3 only **D** 1, 2 and 3

**32** The carbonates of metals W, X and Y are heated and the results are shown.

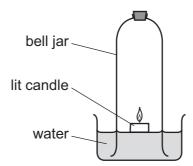

|   | colour of<br>metal carbonate | gas given off which turns limewater cloudy | colour after heating             |
|---|------------------------------|--|----------------------------------|
| W | white                        | yes  | yellow when hot, white when cold |
| Х | green                        | yes  | black                            |
| Υ | white                        | no   | no change                        |

These experimental results can be used to write statements about W, X and Y.

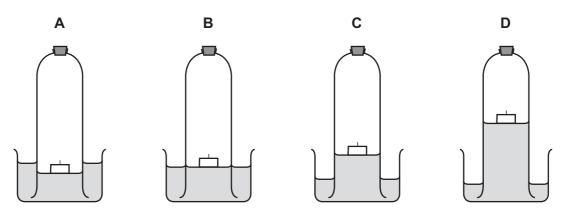

- 1 The carbonates of W and X gave off carbon dioxide on heating.
- 2 Metals X and Y are less reactive than metal W.
- 3 X could be copper.

Which statements are correct?

- **A** 1, 2 and 3 **B** 1 and 2 only **C** 1 and 3 only **D** 2 and 3 only
- 33 The diagram shows an experiment to determine the percentage of oxygen in air.

Which diagram shows the correct level of water after the candle stops burning?

34 Two statements are given.

statement 1 The percentage of carbon by mass is greater in methane than in butane.

statement 2 Butane is one of two isomers with the molecular formula C<sub>4</sub>H<sub>10</sub>.

Which statements are correct?

- both statement 1 and statement 2
- statement 1 only В
- C statement 2 only
- neither statement 1 nor statement 2 D

**35** One mole of each of the compounds shown is completely combusted.

 $C_5H_{12}O$   $C_6H_{12}$   $C_6H_{14}$ 

 $C_6H_{14}O$ 

How many of the compounds need exactly nine moles of oxygen for complete combustion?

**A** 1

**B** 2

С 3 **D** 4

**36** The reactants and products of two reactions are shown.

reaction 1  $C_3H_6 + H_2O \rightarrow X$ 

reaction 2  $X + O_2 \rightarrow CO_2 + H_2O$ 

Which row correctly describes these two reactions?

|   | identity of compound X | conditions for reaction 1    | reaction 2    |  |  |  |  |
|---|------------------------|------------------------------|---------------|--|--|--|--|
| Α | butanol                | high pressure and a catalyst | combustion    |  |  |  |  |
| В | butanol                | heat and a catalyst          | decomposition |  |  |  |  |
| С | propanol               | heat and a catalyst          | decomposition |  |  |  |  |
| D | propanol               | heat and a catalyst          | combustion    |  |  |  |  |

- 37 Which statement about carboxylic acids is correct?
  - A All carboxylic acids include the group:

- **B** Ethanoic acid reacts with both copper(II) oxide and copper.
- **C** Methanoic acid, formed by bacterial oxidation, is present in vinegar.
- **D** Propanoic acid decolourises acidified potassium manganate(VII).
- 38 The structure of an ester is shown.

What is the name of this ester?

- A butyl butanoate
- **B** butyl propanoate
- **C** propyl butanoate
- D propyl propanoate
- **39** Poly(ethene) is formed by ......1..... polymerisation of ethene.

The formation of nylon and *Terylene* are examples of .....2..... polymerisation.

Proteins contain the same .....3..... linkage as nylon.

Fats contain the same .....4..... linkage as *Terylene*.

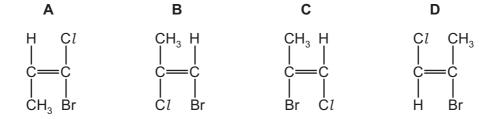

On hydrolysis, proteins form .....5......

Which words correctly complete gaps 1–5?

|   | 1            | 2            | 3     | 4     | 5             |  |  |
|---|--------------|--------------|-------|-------|---------------|--|--|
| Α | addition     | condensation | amide | ester | amino acids   |  |  |
| В | addition     | condensation | amide | ester | simple sugars |  |  |
| С | addition     | condensation | ester | amide | amino acids   |  |  |
| D | condensation | addition     | ester | amide | simple sugars |  |  |

**40** The repeat unit of a polymer is shown.

Which monomer would produce this polymer?

## **BLANK PAGE**
