

## UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS General Certificate of Education Ordinary Level

CANDIDATE NAME				
CENTRE NUMBER		CANDI NUMBI		

# 0 4 0 0 2 6 3 6 0 8

#### **ENVIRONMENTAL MANAGEMENT**

5014/21

Alternative to Coursework

May/June 2013

1 hour 30 minutes

Candidates answer on the Question Paper.

Additional Materials:

Ruler

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

Electronic calculators may be used.

DO NOT WRITE IN ANY BARCODES.

#### Answer all questions.

Study the appropriate Source materials before you start to write your answers.

Credit will be given for appropriate selection and use of data in your answers and for relevant interpretation of these data. Suggestions for data sources are given in some questions.

You may use the source data to draw diagrams and graphs or to do calculations to illustrate your answers.

At the end of the examination, fasten all your work securely together.

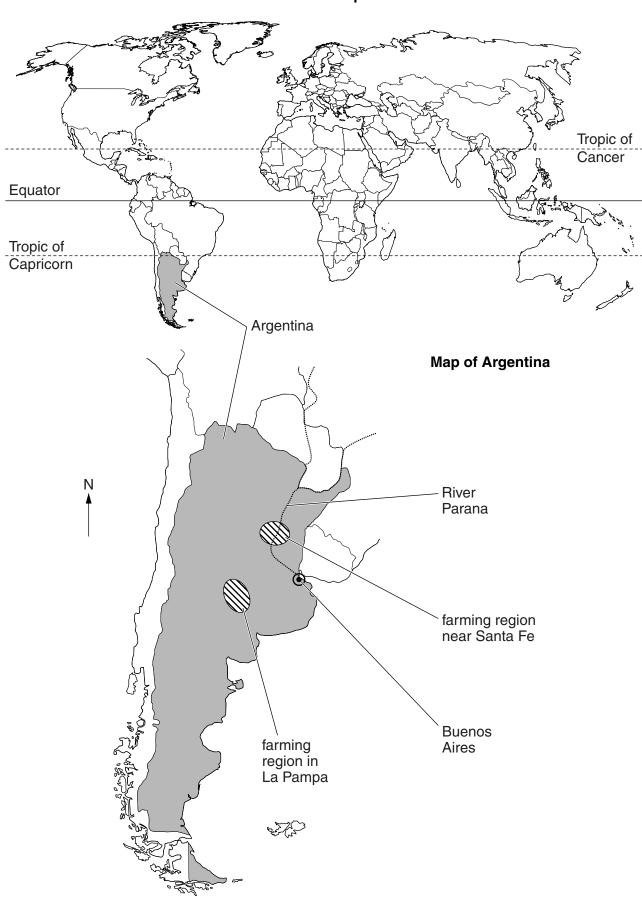

The number of marks is given in brackets [] at the end of each question or part question.

### World map

Area of Argentina: 2800000 sqkm

Population: 43 million Children per woman: 2.3 Life expectancy: 77 years

**Currency:** Argentine pesos (4.0 = 1US\$)

Language: Spanish

Climate: temperate, becomes drier towards the northwest and south east

Terrain: vast grassy plains of the Pampas in the northern half, dry plateau of Patagonia in the south,

Andes Mountains in the west

Main exports: soybeans, maize, wheat, beef, manufactured goods and fuels (mainly gas).

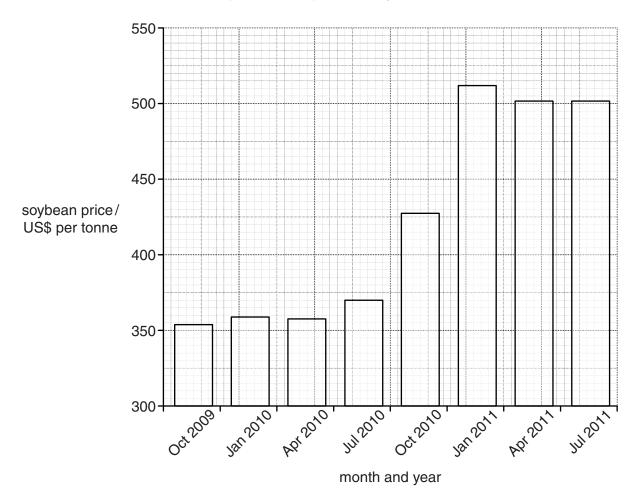

Argentina is a country rich in natural resources, with a long history of exporting the agricultural products of the Pampas and a wide industrial base. Approximately 14 million people live in the capital city, Buenos Aires. Argentina has suffered from several economic crises in the last hundred years but the economy has performed well since the world recession of 2009. The rate of inflation remains high.

#### Answer all the questions.

For
Examiner's
1100

**(b)** The World demand for soybeans has increased in recent years because they can be used both as an animal feed and as a fuel. The graph shows the world price of soybeans between October 2009 and July 2011.

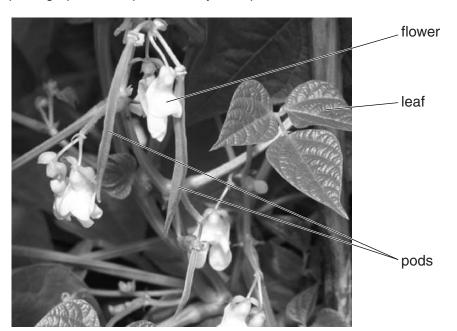

#### Graph of world price of soybeans

Describe what is shown by the graph.

(c)	soyl with	of the soybean grown in Argentina is GM (genetically modified). The seeds of beans have been genetically modified so a weedkiller 'round up' can be sprayed out damaging the soybean crop. The weedkiller allows large areas of land to be sted with one crop (monoculture).
	(i)	Explain one advantage to the farmer of using GM soybeans.
	(ii)	Suggest <b>two</b> possible problems of having large areas of monoculture.
		[2]
	(iii)	Some people think growing GM crops is a risk to the environment. Why do they think this?
		[2]

For Examiner's Use (d) The photograph shows part of a soybean plant.

For Examiner's Use

Soybean plants grow rapidly. A scientist planted soybean seeds in two separate containers using soil that had never been used to grow soybeans. One container had urea added, a fertiliser releasing nitrogen. He took sample plants from each container every 15 days. He found the dry mass of each sample. The results are shown below.

	Dry mass of soybean growth / g m <sup>-2</sup>						
days from planting	soil without added urea	soil with added urea					
15	1.0	1.0					
30	2.0	2.0					
45	4.2	4.4					
60	10.8	10.6					
75	12.5	12.4					

(i)	State <b>two</b> factors that the scientist needed to keep the same for both containers.
	[2]

(ii) Plot a graph of the data in the table on page 6.

Ι.	_	. 1	

(iii)	Did the fertiliser make a difference to the growth of soybeans in the two soils? Using information from the graph and table explain your answer.
	[3]

**(e)** The scientist then went to three fields where soybeans were going to be planted. He measured the concentration in the soil of a different nutrient, phosphate. He repeated the measurements after the first harvest in each field. The results are shown below.

For Examiner's Use

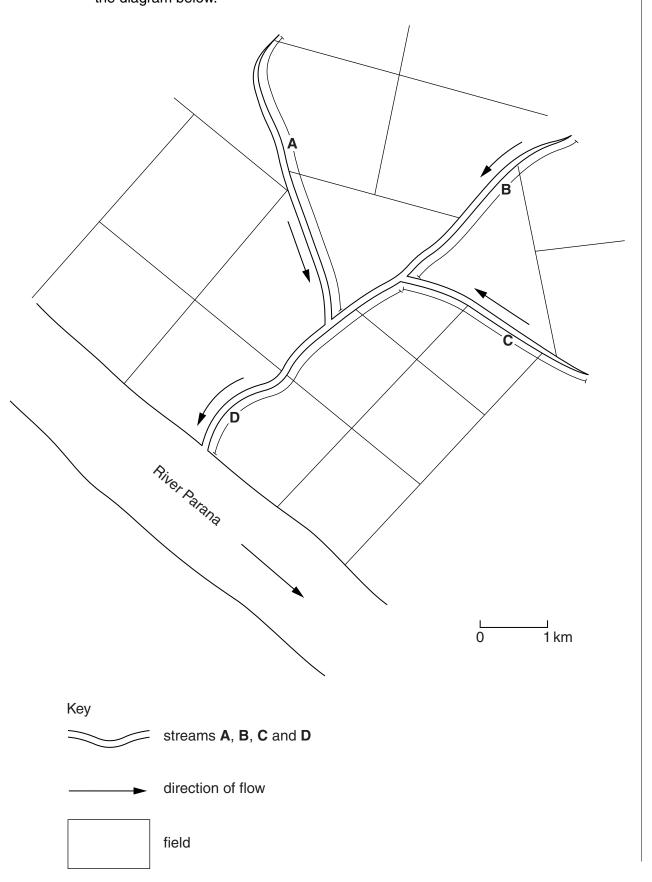

field	phosphate concentration before planting / ppm	phosphate concentration after first harvest / ppm
1	1.0	0.8
2	0.9	0.7
3	0.9	0.7

(i)	Suggest an explanation for what happened to the phosphate concentration during the growing season.
	[1]

TURN OVER FOR QUESTION 1(e)(ii)

(ii) Farmers often grow soybeans year after year due to high demand. To maintain high crop yields fertilisers are added after the first year of planting soybeans. Another scientist was worried that repeated additions of fertiliser could cause environmental damage to streams and rivers. The scientist looked at a map of areas that had been planted with soybeans for several years and the drainage system as shown in the diagram below.

For Examiner's Use

Look at the map.

For
Examiner's
Πea

She studied the map to look at the drainage system. She tried to predict which stream, **A**, **B**, **C** or **D**, would have the **highest** and **lowest** phosphate concentration where soybeans had been planted and fields fertilised. Suggest what she would have predicted.

	stream with <b>highest</b> phosphate concentration	
	stream with lowest phosphate concentration	[1]
(iii)	Describe the changes to life in the streams that can be caused by high phospha concentrations.	ate
		[5]

(f) A farmer grew GM soybeans in the same field year after year, adding enough fertiliser to replace the nutrients used by the crop each year. The table shows part of the farm records for this field over a period of 6 years.

year	crop	yield / tonnes per hectare			
1	soybean	3.8			
2	soybean	3.5			
3	soybean	3.3			
4	soybean	3.3			
5	soybean	2.8			
6	soybean	2.5			

(i) Calculate drop in yield between year one and year six as a percentage of the yield in year one.

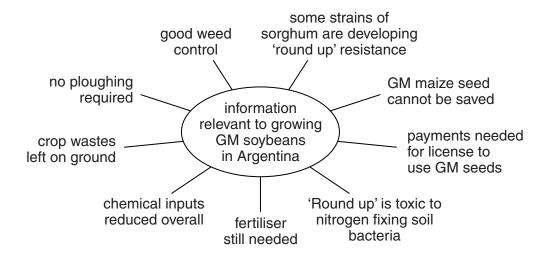

Space for working.

(11)	after year in the same field even though the field receives enough fertiliser.	For Examine Use
	[2]	
(iii)	Explain how farmers can avoid a drop in yield such as that shown in the table on page 11.	
	[1]	

(g) The diagram shows some information which is relevant to GM soybean growing in Argentina.

For Examiner's Use

[Total: 32]

of soybeans to increase or decrease over the next 10–20 years? Explain the reaso your view.	ons for
	[4]

Growing GM soybean has been profitable for ten years. Would you expect the farming

**QUESTION 2 BEGINS ON PAGE 15** 

(a) Explain the advantages of using biodiesel.

	rol.	

- (c) The student decided to measure the amount of soot (carbon) particles released by vehicles in the same five districts E, F, G, H and J. The student used the following method.
  - 1. Prepare 15 clear plastic boxes by covering the bottom with sticky jelly.
  - 2. Immediately cover the box with a tightly fitting lid.
  - 3. Place three boxes at each observation point, two metres above the ground.
  - 4. Remove the lids for 24 hours.
  - 5. Collect and seal the boxes.
  - 6. Count the soot particles in each box.

The results for October are shown below. For observation point J the boxes with the soot particles in are shown below the table.

	number of soot particles at each observation point in October						
sample	E	F	G	Н	J		
1	11	6	7	14			
2	8	10	9	11			
3	8	8	5	14			
average number of soot particles	9	8	7	13			

Boxes for observation point **J**

							[1]

(ii) The student found a secondary source of average climatic information for Buenos Aires.

For Examiner's Use

		average monthly temperature and wind speeds for Buenos Aires										
	J	F	М	Α	М	J	J	Α	S	0	N	D
average air temperature / °C	26	25	23	20	16	13	12	13	15	19	22	25
average wind speed / knots	9	9	9	8	8	8	9	9	11	10	10	9
percentage of days with winds greater than 11–15 knots	35	27	28	20	23	24	26	28	40	39	36	31

	Describe now the data in the table helps to explain your conclusion in part (i).
	[3]
(iii)	A newspaper said that air pollution in Buenos Aires was very high in July. Suggest a possible reason for this.
	[1]

**(e)** The same newspaper did a survey of farmers living in an area of La Pampa and of people living in Buenos Aires. The question asked was; Are you in favour of the use of biodiesel in vehicles in Argentina?

For Examiner's Use

percentage of people saying:	yes	no	not sure
People living in Buenos Aires	65	20	15
Farmers in La Pampa	90	5	5

Suggest reasons for the differences between the views of city people and farmers.

	(ii)		anted to find out more about people's views and their knowledge of ewable energy sources. The student started writing a questionnaire.
1.	Wh	at age are you?	
2.	Are	you male or fem	ale?
	Ма	le	Female
3.	Do	you own a car?	
	Yes	<b></b>	No
4.			
5.			
5.			
6.			

Complete the questionnaire with three more questions designed to find out more people's views and knowledge of other renewable energy sources. [4]

(f)	Investing in renewable sources of energy is often very expensive. What arguments would you use to persuade people living in Argentina that paying higher taxes to pay for investment in renewable sources is a good idea?
	[4]
