O Level Computer Studies 7010
Unit 2: The social and economic implications of the use of computers

Recommended Prior Knowledge
Students need to have studied unit 1 before beginning this Unit.

Context
This unit builds on the work done in unit 1 looking at the effects of using a range of computer applications

Outline
Students review the applications studied in unit 1 and identify advantages and disadvantages of use. The unit could be taught directly after unit 1 or later in the course to review and extend the work. In addition to knowledge about applications, candidates should be able to demonstrate a broad knowledge of the economic reasons for using computers and the effects of their use across a range of application areas. They should be able to formulate a reasoned view of the potential effects of any suggested application or development and to show their critical abilities in balancing the advantages and disadvantages of a computerised system.

AO Learning outcomes
Suggested Teaching activities
Learning resources

1.2 Social and economic effects on people and organisations associated directly with the application, on other individuals and organisations, and on society in general.

Using the applications studied in unit 1 identify advantages and disadvantages of the use of those applications. Impact on society of the applications studied in unit 1.

- loss of jobs
- deskilling (caused by computers taking over some of the tasks done by humans therefore skills lost)
- use of call centres overseas (e.g. in service industries, banks etc.; can be cheaper to take these jobs overseas)

Computers and modern communications techniques allow training, design work, etc. to be done in several countries

Look at the economic reasons for using computers, demonstrate this through the use of case studies e.g. banking, shopping, manufacture etc.

http://www.theteacher99.btinternet.co.uk/theteacher/gcse/newgcse/module9/task9.htm identifies advantages and disadvantages of a hospital control system

L+W 2.1

Economic reasons for the use of computers. Changes to and the development of new products and services.

http://www.bbc.co.uk/schools/gcsebitesize/ict/implications/2workpatternsrev4.shtml better quality products

http://www.cedar.unet.com/ict4demo/loader/indexc.htm advantages of banking
Changes in the working environment, employment and retraining.

Look at the changes in employment because computers are used; demonstrate this through the use of case studies e.g. banking, secretarial work, manufacture etc.

Look at the need for retraining including the need for updating skills as new and upgraded packages are introduced also consider ways of training individuals e.g. use of CD-ROMs, DVDs and multimedia.

Also refer to comments above when considering the case studies.

Privacy and integrity of data, data protection legislation, hacking and other computer crime, computer viruses.

Identify the need to protect the privacy and integrity of data and the type of law that support this (laws vary from country to country but usually the basic premises are very similar)

Introduce the idea of computer crime and look at methods of keeping data secure and identify sensible precautions against computer viruses. Computer crime includes: hacking, transferring funds illegally/fraud, deliberate sending of viruses, etc.

Examples from:

- hacking (suitable precautions include: use of passwords and ids, anti-hacking software, monitoring the system, physical securities, encryption of data, etc.)
- sending viruses (suitable precautions include: anti-virus software, care when downloading/using information from "unknown" disks, care when using internet/receiving emails and associated attachments, etc. Recall that backing up files doesn't guard against viruses)
- fraud/transferring funds (similar precautions as with hacking)

|    | Security and reliability including consequences of system failure | Introduce the idea of system failure using contrasting examples e.g. failure during a batch update of customer records and a failure of an air traffic control system. Other examples could be chosen from various case studies (e.g. control of chemical/nuclear plant, monitoring of patients in a hospital etc. to validate the point)... | k/theteacher/gcse/newgcse/module5/task6.htm details methods of system security
